

## **Chapter-4**

---

## **Results**

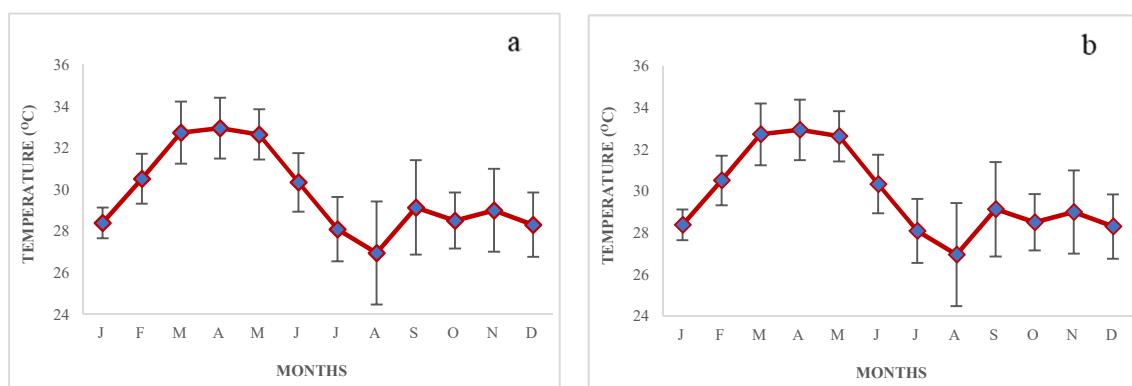

#### 4.1 Physico chemical parameters

The monthly values of selected hydrographic parameters from the rivers of Palakkad district were collected from ten stations during November 2018 to October 2019. As a result, the data was collected and an average for various parameters was calculated.

##### 4.1.1 Temperature

The monthly temperature variations of the surface water at the ten study stations are depicted in figures 3 a&b. The mean temperature values month wise ranged from  $26.93 \pm 2.47$  °C (August) to  $32.93 \pm 1.45$  °C (April). Minimum value observed in monsoon season and maximum value in pre monsoon. Water temperature fluctuated from a minimum of  $27.96 \pm 2.98$  °C at station 10 to a maximum of  $31.95 \pm 2.29$  °C at station 7. The ANOVA of the monthly variation of temperature showed significant difference between months ( $P<0.001$ ) and sites ( $P<0.001$ ). The coefficient of correlation illustrated significant negative correlation with DO and positive correlation with all other parameters.

**Figure 3. Graphs showing monthly and spatial variation of Temperature (a&b)**

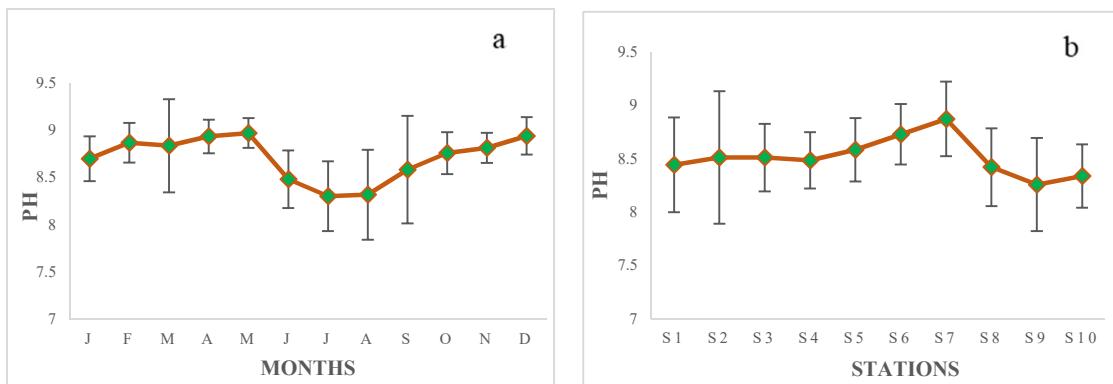

##### 4.1.2 pH

Monthly the mean pH values ranged from  $8.3 \pm 0.36$  (July) to  $8.96 \pm 0.15$  (May) presented in figures 4 a&b. Minimum value observed in monsoon season and maximum value in pre monsoon. pH value fluctuated from a minimum of  $8.2 \pm 0.43$  at

station 9 to a maximum of  $8.87 \pm 0.35$  at station 7. The ANOVA of the monthly variation of pH showed significant difference between months ( $P<0.001$ ). The results showed significant negative correlation with silicate and DO positively correlation with all other parameters.

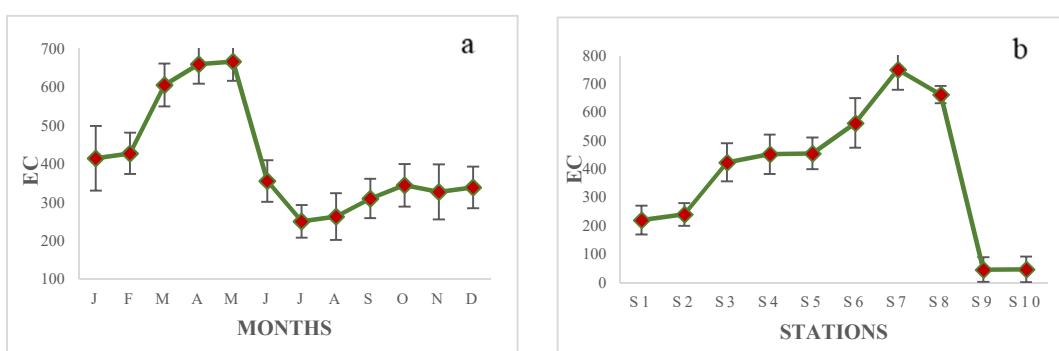

**Figure 4. Graphs showing monthly and spatial variation of pH (a&b)**

#### 4.1.3 Electrical Conductivity (EC)

The mean value of the conductivity for the entire period of observation are depicted in figures 5 a&b. The highest average value recorded in the study area during the month of May ( $666.16 \pm 49.86$ ) at station 7 ( $750.35 \pm 71.68$ ) and the minimum conductivity was recorded from station 9 ( $46.03 \pm 43.51$ ) during the month of July (250.53  $\pm 42.49$ ). The ANOVA of the monthly variation of electrical conductivity showed significant difference between months ( $P<0.001$ ). The findings revealed that significant negative correlation with phosphate and nitrate.

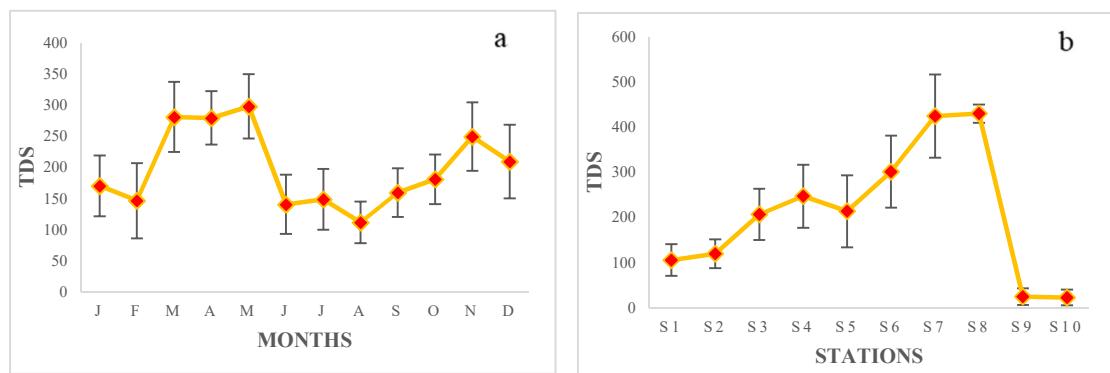

**Figure 5. Graphs showing monthly and spatial variation of EC (a&b)**

#### 4.1.4 Total Dissolved Solids (TDS)

The mean value of the total dissolved solids for the entire period of study are illustrated in figures 6 a&b. In general, highest TDS was observed in May (297.96  $\pm$ 51.75) at station 8 (429.93  $\pm$ 20.38). The lowest value observed in the month of August (111.21  $\pm$ 33.37) at station 10 (22.36  $\pm$ 17.1). Analysis of variance showed no significant relation between months ( $P>0.001$ ). The coefficient of correlation illustrated significant negative correlation with nitrate, phosphate and DO.

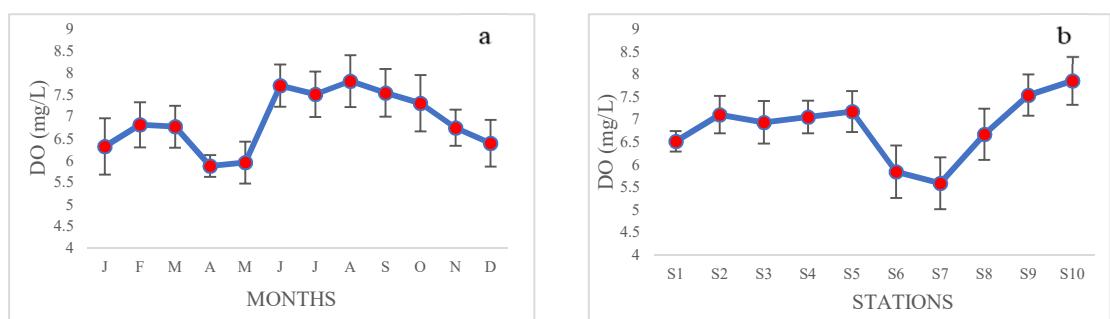

**Figure 6. Graphs showing monthly and spatial variation of TDS (a&b)**

#### 4.1.5 Dissolved Oxygen (DO)

The monthly average values of DO in the study area ranged between  $7.8 \pm 0.71$  mg/L during August to  $5.87 \pm 0.54$  mg/L during April shown in figures 7 a&b. The mean value ranged between  $7.85 \pm 0.91$  mg/L at station 10 to  $5.58 \pm 0.62$  mg/L at station 7. Univariate analysis showed that sufficient variance occurs with DO in months ( $P<0.001$ ). The correlation results revealed significant positive correlation with EC and silicate.

**Figure 7. Graphs showing monthly and spatial variation of DO (a&b)**

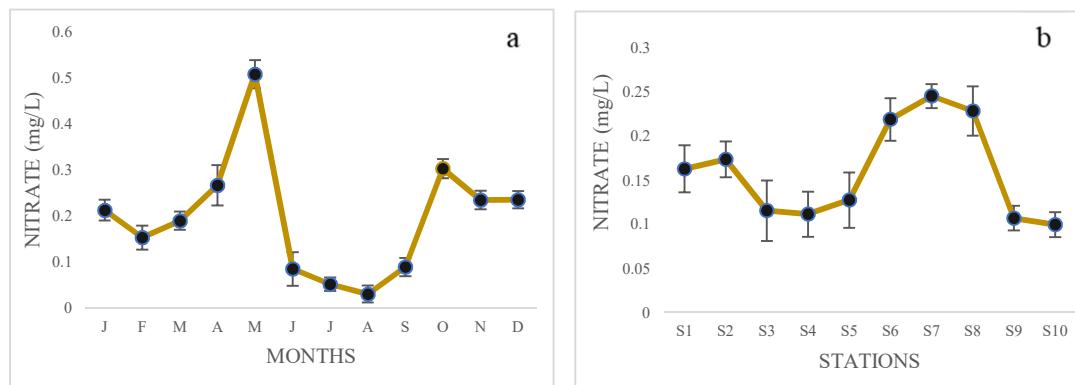

## 4.2 Nutrients

Nutrients like nitrate, phosphate and silicate concentration in the river ecosystem were observed during the present study. The ratio of nutrient concentration fluctuates according to the physiological and biological state of phytoplankton (Balzano et al. 2015). Growth of phytoplankton depends on the availability of nutrients.

### 4.2.1 Nitrate

Analysis of variance in nitrate showed that significant differences ( $P<0.001$ ) observed with the mean temporal variation of nitrate in the study area (Figures 8 a&b) ranged from  $0.03 \pm 0.0$  mg/L in August and  $0.508 \pm 0.03$  mg/L in May. This range of difference in various stations recorded between  $0.09 \pm 0.01$  mg/L at station 10 and  $0.245 \pm 0.013$  mg/L at station 7. The correlation coefficient showed positive correlation with temperature, pH and phosphate. The variations in nitrate concentration are directly related with the growth of phytoplankton in river water because their biological processes determine the N cycling in ecosystem.

**Figure 8. Graphs showing monthly and spatial variation of Nitrate (a&b)**

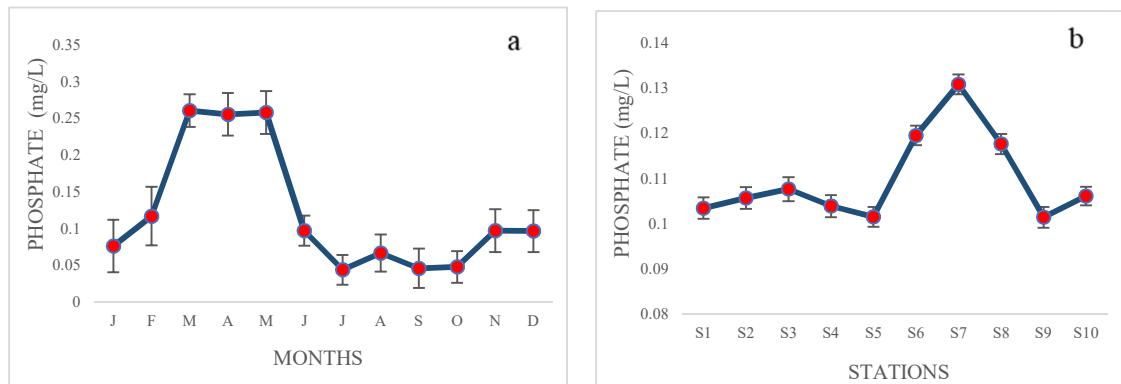

### 4.2.2 Phosphate

The average values of phosphate are given in the figures 9 a&b. The monthly range of phosphate was from  $0.044 \pm 0.02$  mg/L (September) to  $0.26 \pm 0.02$  mg/L (May). The least mean values were recorded from the Stations 9 ( $0.10 \pm 0.002$  mg/L) and highest

mean value was from station 7 ( $0.131 \pm 0.002$  mg/L). Comparatively low amount of phosphate concentration observed throughout the study period. Analysis of variance showed that significant variance between months ( $P < 0.001$ ). The coefficient of correlation illustrated significant positive correlation with temperature, nitrate and phosphate.

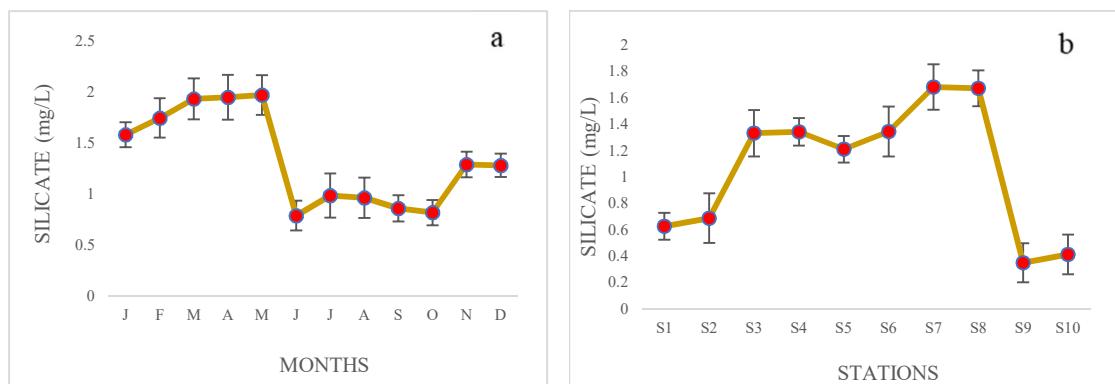

**Figure 9. Graphs showing monthly and spatial variation of Phosphate (a&b)**

#### 4.2.3 Silicate

The monthly average values of silicate in the study area ranged from  $0.96 \pm 0.56$  mg/L during June to  $1.97 \pm 0.79$  mg/L during May. In the present study, the silicate concentration was found to fluctuate from  $0.347 \pm 0.48$  mg/L at station 9 to  $1.67 \pm 0.40$  mg/L at station 7 (Figures 10 a&b). The ANOVA of the monthly change of temperature showed significant difference between months ( $P < 0.001$ ). The correlation results showed significant negative relation with pH, nitrate and phosphate.

**Figure 10. Graphs showing monthly and spatial variation of Silicate (a&b)**

#### **4.3 Algal taxonomy**

The algal taxa recorded from the study area given in (Table 2). Phytoplankton belonging to 257 taxa under seven classes from six divisions namely Chlorophyta, Bacillariophyta, Chrysophyta, Pyrrhophyta, Euglenophyta and Cyanophyta were identified from the 10 stations studied. Out of the 257 algal taxa recorded, 88 belong to class chlorophyceae, 74 to bacillariophyceae, 69 to euglenophyceae, 24 to cyanophyceae, 1 to dinophyceae, 1 to xanthophyceae.

Algal classification mainly based on their morphological and physiological characters, pigment composition and cellular structure. According to Fritsch (1945a), algae classified into eleven classes: Chlorophyceae, Xanthophyceae, Chrysophyceae, Bacillariophyceae, Cryptophyceae, Dinophyceae, Chloromonodineae, Euglineneae, Phaeophyceae, Rhodophyceae and Cyanophyceae (Myxophyceae). In the present study, systematic positions of algae were arranged in accordance with (Prescott 1982; Desikachary 1959; Philipose 1967; Scott and Prescott 1961; Sarode and Kamat 1984) respectively. The taxa within genera were arranged in alphabetical order. The details of collections were given in appendix. The algal taxa were arranged in the following order.

Division - Chlorophyta (Class - Chlorophyceae)

Division - Chrysophyta (Class - Xanthophyceae & Chrysophyceae)

Division - Bacillariophyta (Class - Bacillariophyceae)

Division - Euglenophyta (Class - Euglenophyceae)

Division - Pyrrhophyta (Class - Dinophyceae)

Division - Cyanophyta (Class - Cyanophyceae)

**Table 2.** The Number of phytoplankton taxa collected from the study area

<b>Class</b>	<b>Order</b>	<b>Family</b>	<b>Genus</b>	<b>Species</b>	<b>%</b>
Chlorophyceae	2	10	26	88	34
Xanthophyceae	1	1	1	1	1

**Division: Chlorophyta**  
**Class : Chlorophyceae**  
**Order : Volvocales**  
**Family : Volvocaceae**

**Genus: *PANDORINA* bory**

**1. *Pandorina morum* (O.F. Müller) Bory**  
Iyengar and Desikachary, 1981. p. 418, pl. 243, fig. 7

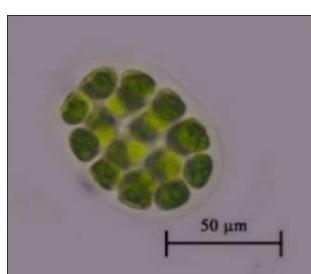

**Dimensions:**

Colony length - 45μm  
Colony breadth - 26μm

**Comments:**

Colonies spherical, 8 celled, within a Common matrix, cells ovate and tightly packed.

**2. *Pandorina morum* (Mull.) Bory f. *major* M.O.P.Iyengar**  
Iyengar and Desikachary, 1981. p. 418, pl. 243, figs. 1-15

**Dimensions:**

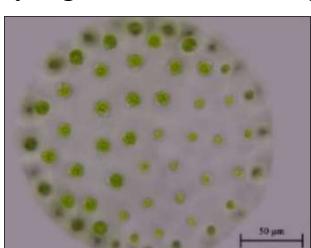

Colony length - 75μm  
Colony breadth - 56μm

**Comments:**

Colonies ellipsoidal with rounded ends, chloroplast with pyrenoids.

**Genus: *PLEODORINA* Shaw**

**3. *Pleodorina sphaerica* M.O.P.Iyengar**  
Iyengar and Desikachary, 1981. p. 446, pl. 262, figs. 1-7

**Dimensions:**

Colony breadth - 182μm

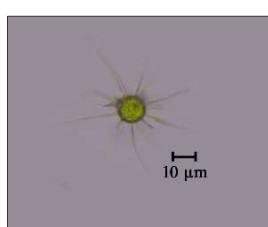

**Comments:**

Colonies spherical, 64 celled, young colonies in posterior side and mature colonies in anterior.

**Order : Chlorococcales**  
**Family : Micractiniaceae**

**Genus: *GOLENKINIA* Chodat**

**4. *Golenkinia paucispina* West. & G.S.West**  
Smith, 1920. p. 127, fig. 5

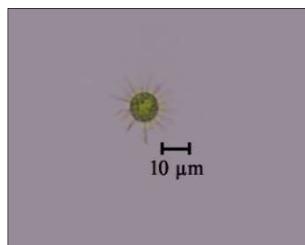

**Dimensions:**

Cell breadth – 12μm  
Setae length – 8μm

**Comments:** Cells solitary, spherical with short tapering delicate setae.

**Genus: GOLENKINIOPSIS Korshikov**

**5. *Golenkiniopsis minutissima* (Iyengar et Balkr.) R.Starr**  
Philipose, 1967. p. 103, fig. 28a

**Dimensions:**

Cell breadth - 9 $\mu$ m

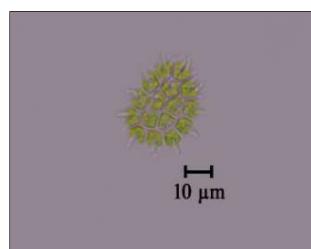

Setae length - 8 $\mu$ m

**Comments:**

Cells solitary, spherical bearing several fine setae.

**Family: Hydrodictyaceae****Genus: PEDIASTRUM Meyen**

**6. *Pediastrum biradiatum* (Meyen) E.Hegewald**  
Philipose, 1967. p. 127, fig. 44

**Dimensions:**

Colony length - 34 $\mu$ m

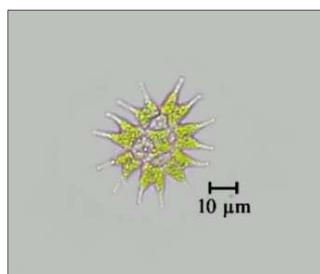

Colony breadth - 28 $\mu$ m

Cell breadth - 9 $\mu$ m

**Comments:**

Colonies with 16 celled, intercellular spaces, Lobes dilated at apex and ending in horn like processes.

**7. *Pediastrum boryanum* var. *longicorne* (Reinsch) Tsarenko**  
Philipose, 1967. p. 119, fig. 40b

**Dimensions:**

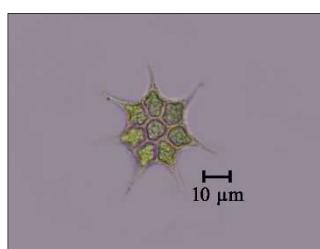

Colony length - 48 $\mu$ m

Cell breadth - 7 $\mu$ m

**Comments:**

Colonies 8 celled, each cell with two short processes ending with short spines.

**8. *Pediastrum simplex* Meyen**  
Philipose, 1967. p. 115, fig. 36c

**Dimensions:**

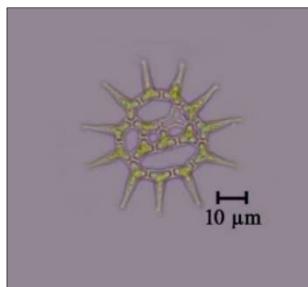

Colony length - 49 $\mu$ m

Cell breadth - 9 $\mu$ m

**Comments:**

Colonies 8 celled, outer side produced in to tapering process, cells without intercellular spaces, cell walls granulated.

**9. *Pediastrum simplex* var. *duodenarium* (Bailey) Rabenhorst  
Philipose, 1967. p. 115, fig. 36 d**

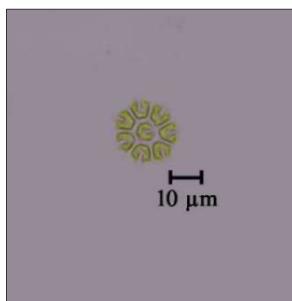

**Dimensions:**

Colony length - 52µm

Cell breadth - 9µm

**Comments:** Colonies with 4 celled, cells without intercellular spaces, cell wall smooth.

**10. *Pediastrum tetras* (Ehr.) Ralfs  
Philipose, 1967. p. 128, fig. 45 b**

**Dimensions:**

Colony length - 17µm

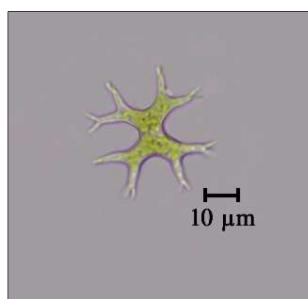

Cell breadth - 5µm

**Comments:**

Colonies with 8 celled, cells divided into Two lobes make incision on outer side of the cell reach to middle of the cell.

Genus: **TETRAEDRON** Kuetzing

**11. *Tetraedron gracile* (Reinsch) Hansgirg  
Philipose, 1967. p. 154, fig. 69a**

**Dimensions:**

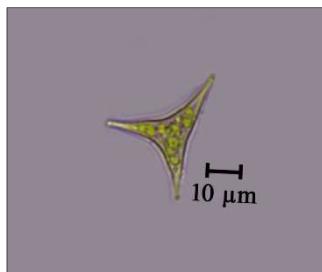

Cell length - 23µm

Cell breadth - 32µm

**Comments:**

Cells rectangular with the corners produced into narrow processes branch twice and end in spines.

**12. *Tetraedron proteiforme* (Turn.) Brunnthaler  
Philipose, 1967. p. 141, fig. 57**

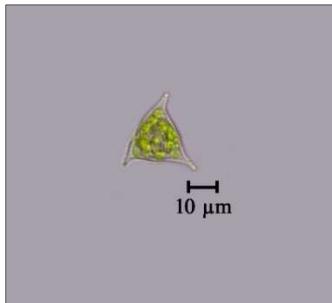

**Dimensions:**

Cell breadth - 30µm

**Comments:**

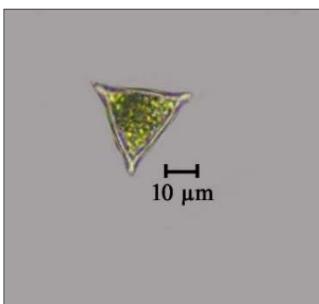

Cells 3 cornered, angles drawn out and ending in long spine.

**13. *Tetraedron regulare* var. *granulatum* Prescott**  
Philipose, 1967. p. 147, fig. 60i

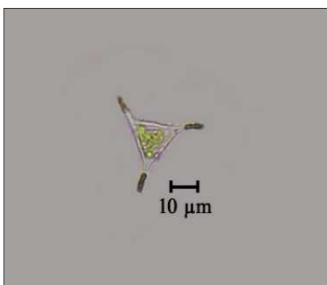

**Dimensions:**  
Cell breadth - $28\mu\text{m}$   
**Comments:**  
Cell wall granular, angles broadly rounded with short spines.

**14. *Tetraedron regulare* var. *minus* Reinsch**  
Philipose, 1967. p. 146, fig. 60h

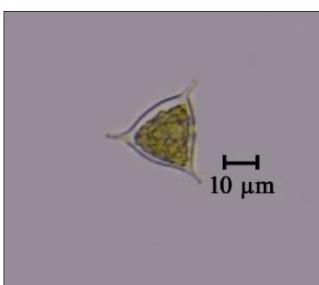

**Dimensions:**  
Cell breadth - $25\mu\text{m}$   
**Comments:**  
Cells tetragonal with long spine on each corner.

**15. *Tetraedron trigonum* (Naegeli) Hansgirg**  
Philipose, 1967. p. 142, fig. 58i

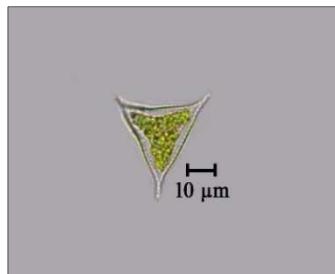

**Dimensions:**  
Cell breadth - $16\mu\text{m}$   
Spine length -  $9\mu\text{m}$   
**Comments:**  
Cells triangular, rounded corners, angles with a stout spine.

**16. *Tetraedron trigonum* f. *crassum* (Reinsch) De Toni**  
Philipose, 1967. p. 142, fig. 58e

**Dimensions:**  
Cell breadth -  $18\mu\text{m}$   
Spine length -  $6\mu\text{m}$   
**Comments:**  
Cells triangular, rounded corners, angles with short spines.

**17. *Tetraedron trigonum* var. *verrucosum* Jao**  
Philipose, 1967. p. 145, fig. 58n

**Dimensions:**

Cell breadth -25μm

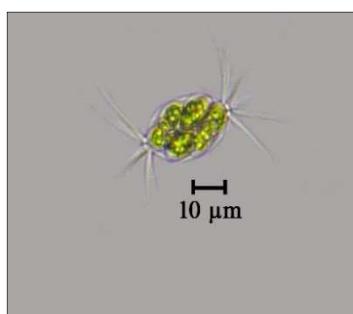

Spine length -7μm

**Comments:**

Cells triangular, angles with a short spine, cell membrane and spines irregularly granulated.

**Family: Oocystaceae****Genus: *LAGERHEIMIA* Chodat**

**18. *Lagerheimia ciliata* (Lag.) Chodat**  
Prescott, 1982. p. 250, pl. 55, fig. 1

**Dimensions:**

Cell length - 23μm

Cell breadth - 15μm

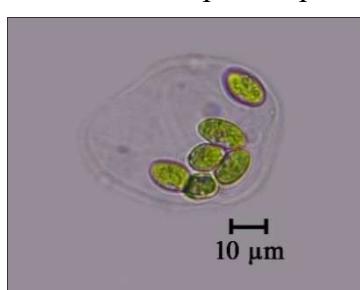

Setae length - 15μm

**Comments:**

Cells oblong-ovate with setae at each pole, chloroplast with pyrenoids.

**Genus: *OOCYSTIS* Naegeli**

**19. *Oocystis borgei* J.W.Snow**  
Prescott, 1951. p. 244, pl. 51, fig. 10

**Dimensions:**

Cell length - 12μm

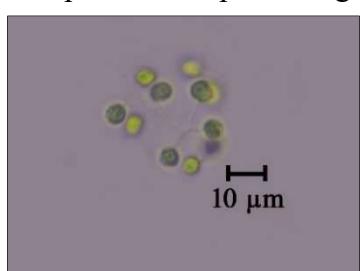

Cell breadth - 9μm

**Comments:**

Cells ellipsoid, ovate, enclosing envelope round.

**Family: Dictyosphaeriaceae****Genus: *DICTYOSPHAERIUM* Naegeli**

**20. *Dictyosphaerium ehrenbergianum* Nageli**  
Philipose, 1967. p. 201, fig. 111

**Dimensions:**

Colony length - 38μm

Cell length - 4μm

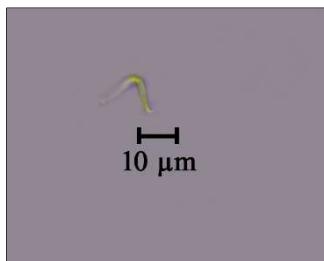

**Comments:**

Colonies spherical, cells ovoid, chloroplast one or two in each cell.

## Family: Selenastraceae

Genus: *ANKISTRODESMUS* Corda21. *Ankistrodesmus convolutus* (Corda)

Philipose, 1967. p. 213, fig. 122 d

**Dimensions:**

Cell length - 3μm

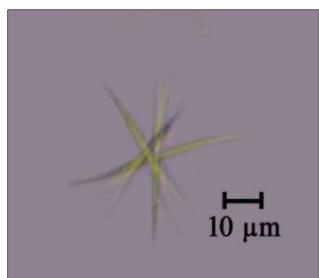

Cell breadth -1.5μm

**Comments:**

Cells solitary, curved, ends pointed.

22. *Ankistrodesmus falcatus* (Corda) Ralfs

Philipose, 1967. p. 211, fig. 121 a

**Dimensions:**

Cell length - 50μm

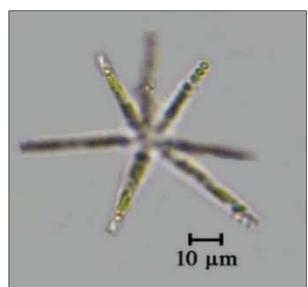

Cell breadth -2μm

**Comments:**

Cells curved, twisted around one another, apices free, with tapering end.

Genus: *ACTINASTRUM* Lagerheim23. *Actinastrum gracillimum* var. *elongatum* (G.M.Smith) Fott

Philipose, 1967. p. 218, fig. 125 d

**Dimensions:**

Cell length - 35μm

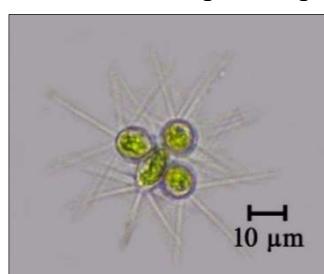

Cell breadth -3μm

**Comments:**

Colonies 8 celled, cells radially arranged joined together to form colonies and apices slightly rounded.

Genus: *MICRATINIUM* Fresenius24. *Micratinium pusillum* var. *elegans* G.M.Smith

Prescott, 1951. p. 288, pl. 66, fig. 7

**Dimensions:**

Cell length - 9μm

Cell breadth -7μm

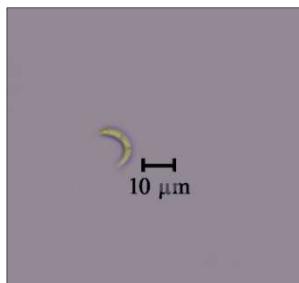

Setae - 20μm

**Comments:**

Colonies 4 celled, cells rounded, setae long, Associated with other cells.

### Genus: *MESSASTRUM* Reinsch

**25. *Messastrum gracile*** (Reinsch) T.S Garcia  
Philipose, 1967. p. 219, fig. 128

#### Dimensions:

Cell length - 13 $\mu\text{m}$   
Cell breadth - 3 $\mu\text{m}$

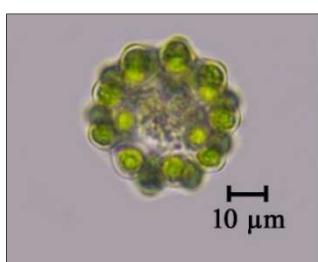

#### Comments:

Cells broad, sickle shaped, lunate, apices of cells acute.

### Family: Coelastraceae

### Genus: *COELASTRUM* Naegeli

**26. *Coelastrum microporum*** Nageli  
Philipose, 1967. p. 228, fig. 135

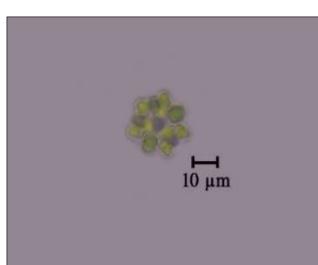

#### Dimensions:

Colony length - 37 $\mu\text{m}$   
Cell breadth - 7 $\mu\text{m}$

#### Comments:

Colonies spherical, cells spherical with small intercellular spaces.

**27. *Coelastrum proboscideum*** Bohlin  
Philipose, 1967. p. 229, fig. 137

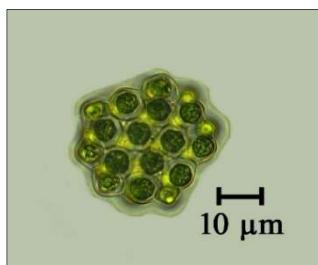

#### Dimensions:

Cell length - 5 $\mu\text{m}$   
Colony breadth - 25 $\mu\text{m}$

#### Comments:

Cells conical, truncate with intercellular spaces.

**28. *Coelastrum sphaericum*** Nageli  
Philipose, 1967. p. 229, fig. 136

#### Dimensions:

Colony breadth - 31 $\mu\text{m}$   
Cell breadth - 7 $\mu\text{m}$

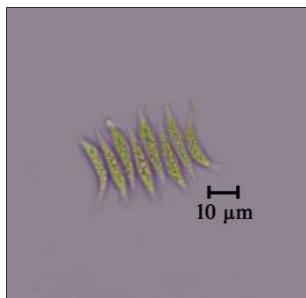

#### Comments:

Cells ovoid, narrow end directed outwards, colony spherical, cells regularly arranged.

## Family: Scenedesmaceae

Genus: *SCENEDESMUS* Meyen

**29. *Scenedesmus acuminatus* (Lagerheim) Chodat**  
Philipose, 1967. p. 251, fig. 161

**Dimensions:**

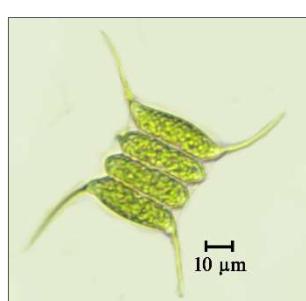

Cell length - 25μm

Cell breadth - 2μm

**Comments:**

Colonies 8 celled, cells fusiform with sharp pointed ends, apical cell lunate shaped, cell wall smooth.

**30. *Scenedesmus carinatus* (Lemm.) Chodat**  
Philipose, 1967. p. 266, fig. 172c

**Dimensions:**

Cell length - 25μm

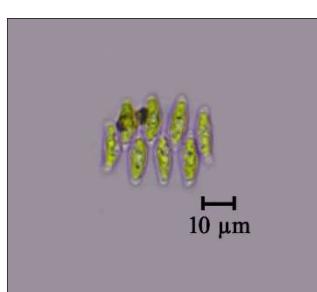

Cell breadth - 9μm

Spine length - 17μm

**Comments:**

Colonies 4 celled, cells arranged in series, fusiform with pointed ends, spines of terminal cells long.

**31. *Scenedesmus bijugatus* var. *graevenitzii* (Bernard) Philipose**  
Philipose, 1967. p. 256, figs. 164 h, j

**Dimensions:**

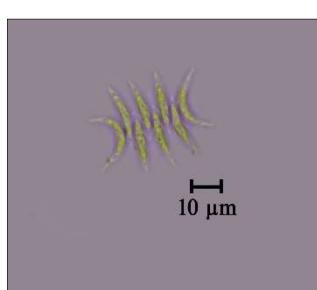

Cell length - 11μm

Cell breadth - 6μm

**Comments:**

Colony 8 celled, cells arranged in alternating series, adjacent cells contact only through small portion of their length.

**32. *Scenedesmus dimorphus* (Turp.) Kützing**  
Philipose, 1967. p. 249, fig. 160a

**Dimensions:**

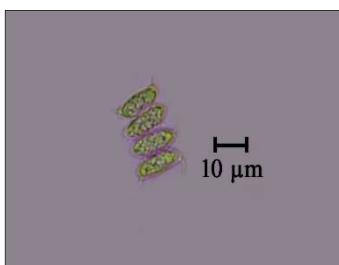

Cell length - 25μm

Cell breadth - 3μm

**Comments:**

Colonies 8 celled, apical cells lunate shaped, individual cells with tapering ends.

**33. *Scenedesmus magnus* Meyen**  
Philipose, 1967. p. 273, fig. 180a

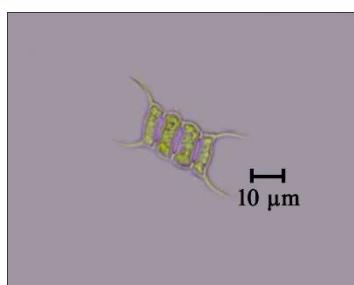

**Dimensions:**

Cell length - 21 $\mu$ m  
Cell breadth - 4 $\mu$ m  
Spine length - 1.5 $\mu$ m

**Comments:**

Colony 4 celled, cells ovoid with rounded ends, poles with spines.

**34. *Scenedesmus perforatus* Lemm.**  
Philipose, 1967. p. 280, fig. 186 a

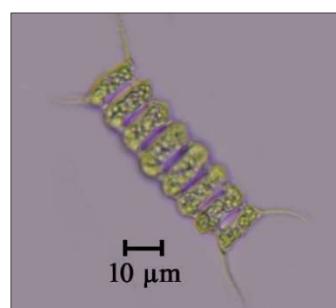

**Dimensions:**

Cell length - 25 $\mu$ m  
Cell breadth - 5 $\mu$ m  
Spine length - 10 $\mu$ m

**Comments:**

Colony 4 celled, cells with perforations and long spines.

**35. *Scenedesmus perforatus* var. *major* (Turn.) Philipose**  
Philipose, 1967. p. 282, fig. 186 f

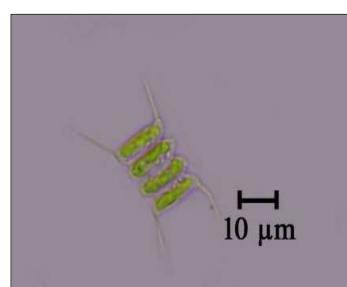

**Dimensions:**

Cell length - 36 $\mu$ m  
Cell breadth - 10 $\mu$ m  
Spine length - 22 $\mu$ m

**Comments:**

Colony 8 celled, cells with perforations 1 $\mu$ m broad, spines long, small perforations between adjacent cells with long spines.

**36. *Scenedesmus quadricauda* Chodat**  
Philipose, 1967. p. 283, fig. 187 h

**Dimensions:**

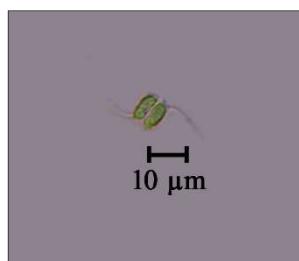

Cell length - 11 $\mu$ m  
Cell breadth - 8 $\mu$ m  
Spine length - 9 $\mu$ m

**Comments:**

Colonies 4 celled, cells cylindrical with rounded ends, cell wall smooth with spines.

**37. *Scenedesmus quadricauda* var. *bicaudatus* Hansgirg**

Philipose, 1967. p. 284, fig. 187 k

**Dimensions:**

Cell length - 12µm

Cell breadth - 4µm

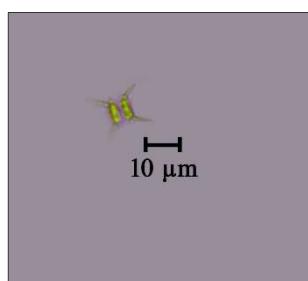

Spine length - 7µm

**Comments:**

Colonies 2 celled, cells with long spine from one pole only.

**38. *Scenedesmus quadricauda* var. *quadrispina* (Chodat) G. M. Smith**

Philipose, 1967. p. 285, fig. 187 h

**Dimensions:**

Cell length - 11µm

Cell breadth - 6µm

Spine length - 3µm

**Comments:**

Colonies 2 celled, cells spherical, cell wall smooth, poles with short spines.

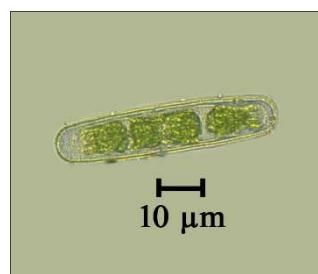

## DESMIDS

**Family: Gonatozygaceae**

**Genus: *CYLINDROCYSTIS* Meneghini**

**39. *Cylindrocystis brebissonii* (Ralfs) De Bary**

Scott and Prescott, 1961. p. 8, pl. 1, fig. 3

**Dimensions:**

Cell length - 50µm

Cell breadth - 11µm

**Comments:**

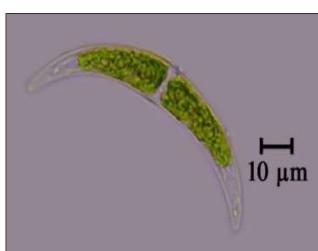

Cells cylindrical with large chloroplast.

**Family: Desmidiaceae**

**Genus: *CLOSTERIUM* Nitzsch**

**40. *Closterium dianae* var. *minus* Hieronyms**

Scott and Prescott, 1961. p. 11, pl. 2, fig. 8.

**Dimensions:**

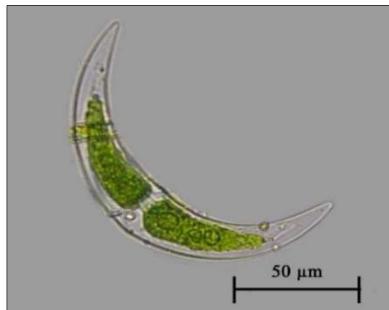

Cell length - 100µm

Cell breadth - 10µm

**Comments:**

Cells slightly curved, attenuated at apices, apex 4µm.

**41. *Closterium ehrenbergii* Menegh. ex Ralfs**  
West and West, 1904. vol. 1, p. 143, pl. 17, fig. 1

**Dimensions:**

Cell length - 472µm

Cell breadth - 69µm

**Comments:**

Cells large, curved, inner margin slightly inflated in the middle region, cell wall smooth and contain many scattered pyrenoids.

**42. *Closterium kuetzingii* Brebisson**  
West and West, 1904. vol. 1, p. 186, pl. 25, figs. 6–11

**Dimensions:**

Cell length - 54µm

Cell breadth - 12µm

**Comments:**

Cells medium size, straight, median part of the cells fusiform, lanceolate, apex 4µm.

**43. *Closterium lagoense* Nordst.**  
West and West, 1904. vol. 1, p. 114, pl. 11, fig. 6

**Dimensions:**

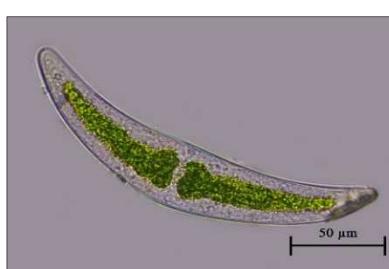

Cell length - 155µm

Cell breadth - 25µm

**Comments:**

Cells medium size, narrowed to apices, straight, apex 6µm.

**44. *Closterium moniliferum* Ehr. ex Ralfs**  
West and West, 1904. vol. 1, p. 142, pl. 16, fig. 16

**Dimensions:**

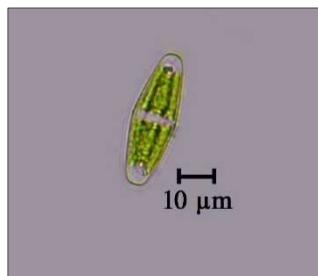

Cell length – 328µm

Cell breadth - 40µm

**Comments:**

Cells narrowed towards the apex, cell wall smooth and colourless, poles 9µm.

**45. *Closterium navicula* Breb. Lukemuller**  
West and West, 1904. vol. 1, p. 75, pl. 7, fig. 14

**Dimensions:**

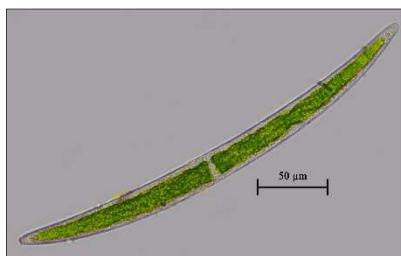

Cell length - 35μm

Cell breadth - 12μm

**Comments:**

Cells small, fusiform, poles rounded, cell wall smooth and colourless.

**46. *Closterium peracerosum* F.Gay**  
West and West, 1904. vol. 1, p. 154, pl. XIX, figs. 9

**Dimensions:**

Cell length - 300μm

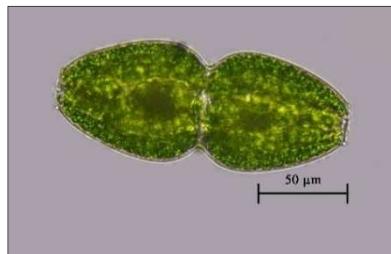

Cell breadth - 17μm

**Comments:**

Cells slightly curved, cell wall smooth, colourless, broad, chloroplasts with ridges and pyrenoids.

**Genus: *PLEUROTAENIUM* Nageli**

**47. *Pleurotaenium ovatum* Nordst. (Nordst.)**  
Scott and Prescott, 1961. p. 17, pl. 6, fig. 2

**Dimensions:**

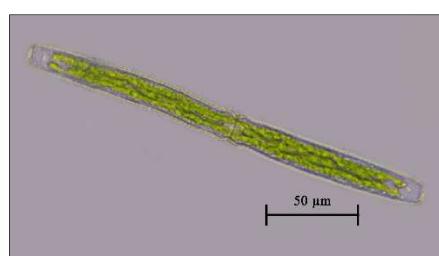

Cell length - 325μm

Cell breadth - 80μm

**Comments:**

Cells bearing a ring of tubercles, isthmus 46μm, pole 28μm,

**48. *Pleurotaenium trabecula* var. *rectum* (Delp.) West et West**  
West and West, 1904. vol. 1, p. 212, pl. 30, fig. 10

**Dimensions:**

Cell length - 225μm

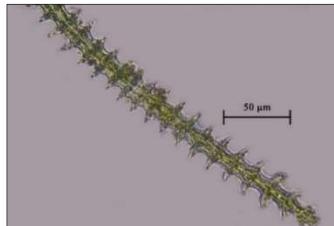

Cell breadth - 20μm

**Comments:**

Cells medium size, semicells without undulations above the basal inflations, poles 14μm, isthmus 16μm.

**Genus: *TRIPLOCERAS* Bailey**

**49. *Triploceras gracile* f. *undulatum*** (Scott & Prescott) Townsend  
Scott and Prescott, 1961. p. 21, pl. 6, fig. 9

**Dimensions:**

Cell length - 360 $\mu$ m

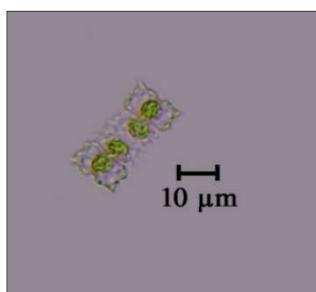

Cell breadth - 19 $\mu$ m

**Comments:**

Cells with apex 14 $\mu$ m.

**Genus: *EUASTRUM* Ehrenberg**

**50. *Euastrum gayanum*** De Toni  
Scott and Prescott, 1961. p. 27, pl. 14, fig. 3

**Dimensions:**

Cell length – 10.5 $\mu$ m

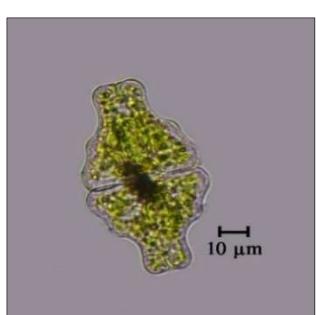

Cell breadth - 3 $\mu$ m

Isthmus - 3.5 $\mu$ m

**Comments:**

Cells smaller type, semicells are parallel with swellings.

**51. *Euastrum sinuosum*** Kützing  
West and West, 1905. vol. 2, p. 20, pl. 36, fig. 1

**Dimensions:**

Cell length - 75 $\mu$ m

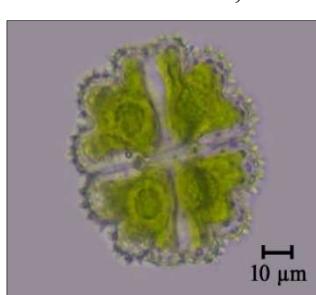

Cell breadth - 43 $\mu$ m

Isthmus - 13 $\mu$ m

**Comments:**

Cells medium size, lower and upper lobes lying above one another.

**52. *Euastrum spinulosum*** Delponte  
Scott and Prescott, 1961. p. 40, pl. 10, fig. 3

**Dimensions:**

Cell length - 61 $\mu$ m

Cell breadth - 49 $\mu$ m

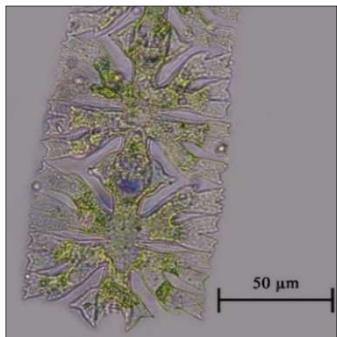

Isthmus - 13 $\mu$ m

**Comments:**

Cells wide and larger, widely rounded lobes, rosette shape.

**Genus: *MICRASTERIAS* Agardh**

**53. *Micrasterias foliacea* Bail. ex ralfs**  
Scott and Prescott, 1961. p. 48, pl. 20, fig. 4

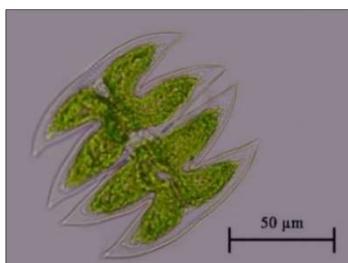

**Dimensions:**

Cell length - 75µm  
Cell breadth - 76µm

**Comments:**

Cells broad and leaf like form and lobed.

**54. *Micrasterias laticeps* var. *acuminata* W. Krieger**  
Turner, 1892. P. 95. pl. 5, fig. 2

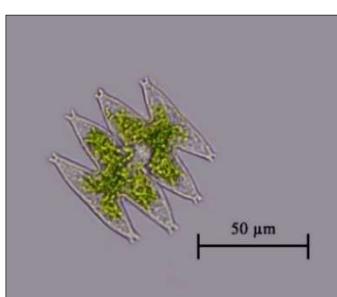

**Dimensions:**

Cell length - 90µm  
Cell breadth - 88µm

**Comments:**

Cells possess acuminate instead of 2-denticulate basal lobes.

**55. *Micrasterias pinnatifida* Ralfs**  
Scott and Prescott, 1961. p. 51, pl. 12, fig. 6

**Dimensions:**

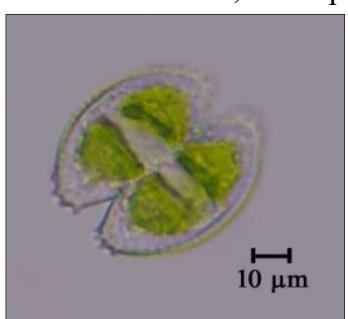

Cell length - 60µm  
Cell breadth - 64µm

**Comments:**

Cells with end margin straight, lobes triangular, cells bifid projecting above the apical margin.

**Genus: *COSMARIUM* Corda**

**56. *Cosmarium auriculatum* Reinsch**  
Scott and Prescott, 1961. p. 54, pl. 26, fig. 4

**Dimensions:**

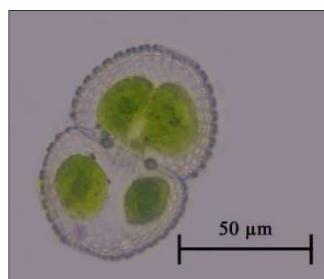

Cell length - 42µm  
Cell breadth - 38µm  
Isthmus - 21µm

**Comments:**

Cells granulate and deeply constricted.

**57. *Cosmarium binum* Nordst.**

West and West, 1908. vol. 3, p. 246, pl. 88, fig. 11

**Dimensions:**

Cell length - 83μm

Cell breadth - 50μm

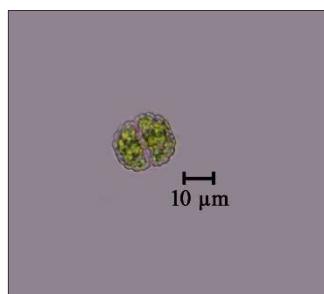

Isthmus - 13μm

**Comments:**

Cell margins granulate, granules arranged in concentric rings.

**58. *Cosmarium blyttii* Wille**

Scott and Prescott, 1961. p. 55, pl. 31, fig. 15

**Dimensions:**

Cell length - 19μm

Cell breadth - 15μm

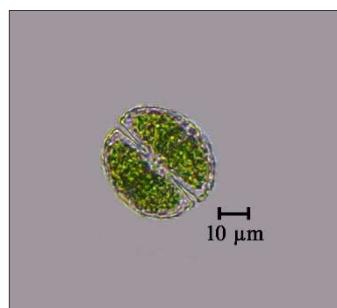

Isthmus - 5μm

**Comments:**

Cells very small, crenate, wall margins wavy.

**59. *Cosmarium depressum* (Nag.) Lund.**

Scott and Prescott, 1961. p. 58, pl. 26, fig. 6

**Dimensions:**

Cell length - 35μm

Cell breadth - 32μm

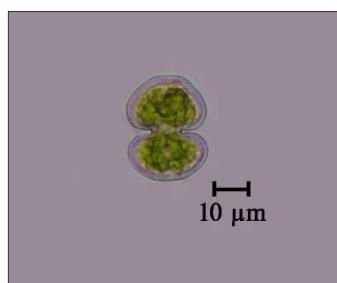

Isthmus - 7μm

**Comments:**

Cells lunar shaped and margins with crenations.

**60. *Cosmarium depressum* var. *apertum* (Turn.) Hirano**

Scott and Prescott, 1961. p. 58, pl. 26, fig. 7

**Dimensions:**

Cell length - 26μm

Cell breadth - 21μm

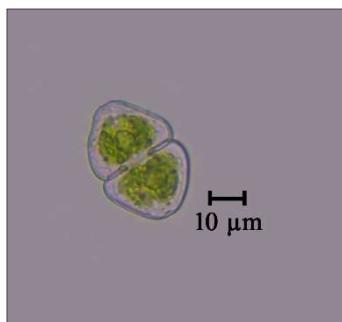

Isthmus - 6μm

**Comments:**

Cell wall smooth, thick and deeply constricted.

**61. *Cosmarium granatum* Breb. ex Ralfs**

West and West, 1905. vol. 2, p. 186, pl. 63, fig. 3

**Dimensions:**

Cell length - 35μm

Cell breadth - 25μm

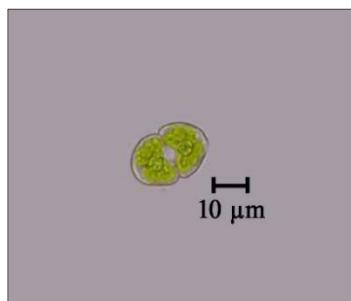

Isthmus - 9μm

**Comments:**

Cells pyramidate shaped, sinus narrow and slightly dilated.

**62. *Cosmarium granatum* var. *rotundatum* W. Krieg.**

Scott and Prescott, 1961. p. 59, pl. 27, fig. 17

**Dimensions:**

Cell length - 24μm

Cell breadth - 14μm

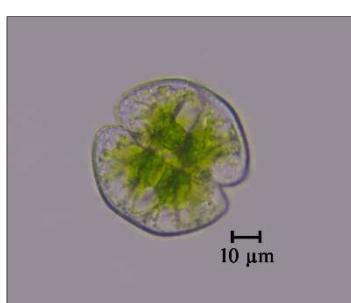

Isthmus - 6μm

**Comments:**

Cells small with central dilation, semiells with single pyrenoids.

**63. *Cosmarium lundellii* Delp.**

Scott and Prescott, 1961. p. 60, pl. 25, fig. 6

**Dimensions:**

Cell length - 75μm

Cell breadth - 56μm

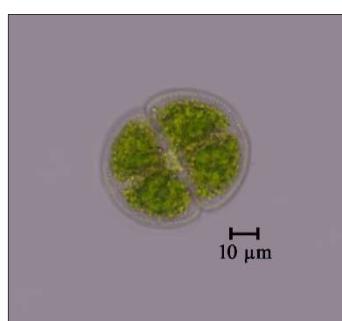

Isthmus - 31μm

**Comments:**

Cells with granulations, sinus narrow and constricted, rounded at apex.

**64. *Cosmarium lundellii* var. *circulare* (Reinsch) W. Krieg.**

Scott and Prescott, 1961. p. 60, pl. 25, fig. 7

**Dimensions:**

Cell length - 61μm

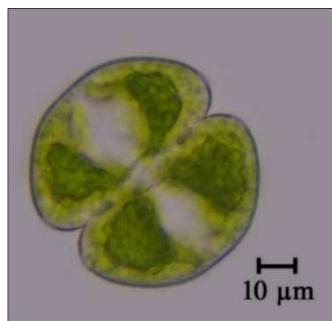

Cell breadth - 50μm

Isthmus - 14μm

**Comments:**

Semicells circular in shape, cell wall smooth and simple.

**65. *Cosmarium lundellii* var. *corruptum* (Turn.) West & West**  
Scott and Prescott, 1961. p. 61, pl. 25, fig. 9

**Dimensions:**

Cell length - 59μm

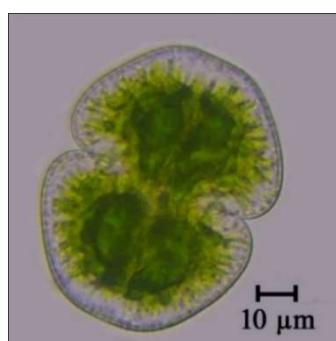

Cell breadth - 51μm

Isthmus - 14μm

**Comments:**

Cells with convex apical margins, cell wall smooth, simple and closely punctate.

**66. *Cosmarium galeritum* Nordst.**  
West and West, 1912. vol. 4, p. 194, pl. 63, fig. 25

**Dimensions:**

Cell length - 59μm

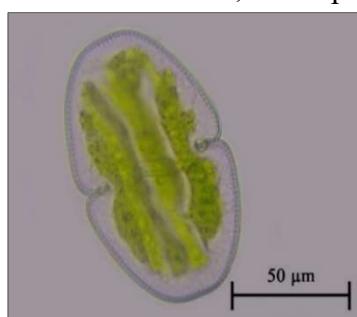

Cell breadth - 51μm

Isthmus - 12μm

**Comments:**

Cells truncate-pyramidal, cell wall smooth and simple.

**67. *Cosmarium maculatum* Turn.**  
Scott and Prescott, 1961. p. 61, pl. 24, fig. 2

**Dimensions:**

Cell length - 175μm

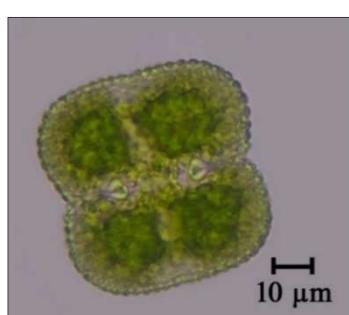

Cell breadth - 71μm

Isthmus - 46μm

**Comments:**

Cells larger in size, with granulations, cell wall striated.

**68. *Cosmarium margaritatum* var. *sublatum* (Nordst.) Krieg.**  
Scott and Prescott, 1961. p. 63, pl. 29, fig. 4

**Dimensions:**

Cell length - 61μm

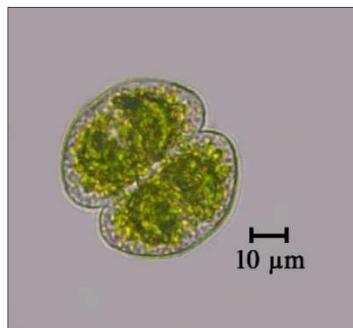

Cell breadth - 54μm

Isthmus - 22μm

**Comments:**

Cells of medium size, sinus narrow and closed, cell wall granulated.

**69. *Cosmarium medioscrobiculatum* var. *egranulatum* Gutw.**  
Scott and Prescott, 1961. p. 63, pl. 26, fig. 3

**Dimensions:**

Cell length - 48 $\mu$ m

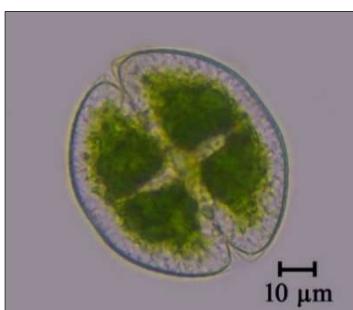

Cell breadth - 45 $\mu$ m

Isthmus - 18 $\mu$ m

**Comments:**

Cells of medium size, rounded apex, sinus small.

**70. *Cosmarium obsoletum* (Hantzsch) Reinsch**  
Scott and Prescott, 1961. p. 63, pl. 26, fig. 1

**Dimensions:**

Cell length - 52 $\mu$ m

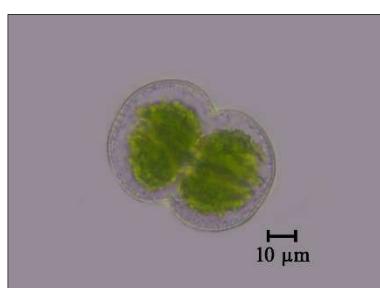

Cell breadth - 60 $\mu$ m

Isthmus - 26 $\mu$ m

**Comments:**

Cells constricted with narrow sinus, granulate, apex in convex shape.

**71. *Cosmarium pseudoconnatum* Nordst.**  
Scott and Prescott, 1961. p. 66, pl. 25, fig. 4

**Dimensions:**

Cell length - 61 $\mu$ m

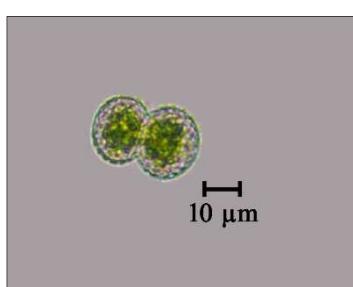

Cell breadth - 47 $\mu$ m

Isthmus - 40 $\mu$ m

**Comments:**

Semicells circular, cell wall punctate, shallow sinus.

**72. *Cosmarium punctulatum* var. *subpunctulatum* (Nordst.) Borg.**  
Scott and Prescott, 1961. p. 67, pl. 31, fig. 8

**Dimensions:**

Cell length - 25 $\mu$ m

Cell breadth - 23 $\mu$ m

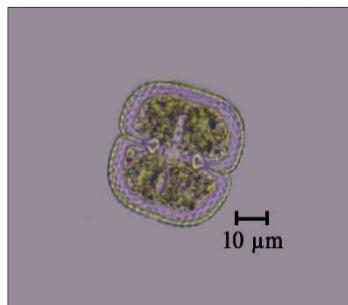

Isthmus - 13 $\mu$ m

**Comments:**

Cells small, rounded, deeply constricted  
With wavy margins.

**73. *Cosmarium quadrum* P.Lundell**

West and West, 1912. vol. 4, p. 20, pl. 100, fig. 4

**Dimensions:**

Cell length - 52μm

Cell breadth - 51μm

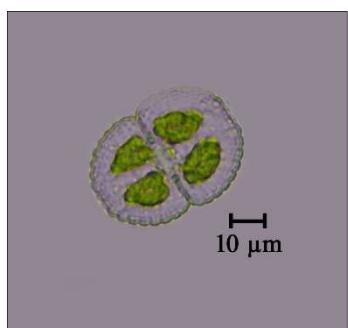

Isthmus - 4μm

**Comments:**

Cells quadrate with deeply constricted, densely granulated.

**74. *Cosmarium quadrifarrium* P.Lundell**

West and West, 1908. vol. 3, p. 141, pl. 76, figs. 15–17 &amp; pl. 77, figs. 1–3

**Dimensions:**

Cell length - 42μm

Cell breadth - 32μm

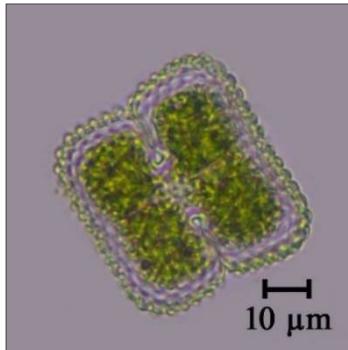

Isthmus - 11μm

**Comments:**

Cells medium size, semicells semicircular and little rounded.

**75. *Cosmarium scabrum* W.B.Turner**

Scott and Prescott, 1961. p. 68, pl. 29, fig. 3

**Dimensions:**

Cell length - 49μm

Cell breadth - 52μm

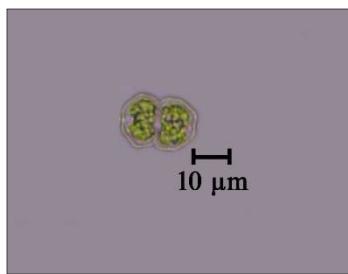

Isthmus - 14μm

**Comments:**

Cells quadrate, cell wall margins granulated, sinus narrow and closed.

**76. *Cosmarium sexangulare* P.Lundell**

Scott and Prescott, 1961. p. 69, pl. 32, fig. 11

**Dimensions:**

Cell length - 18μm

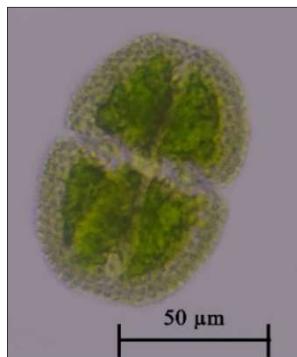

Cell breadth - 12μm

Isthmus - 5μm

**Comments:**

Cells, cell wall margins smooth and wavy, sinus narrow.

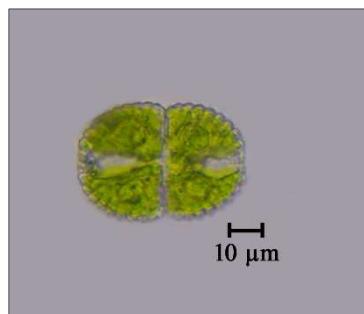

**77. *Cosmarium subspeciosum* var. *validius* Nordst.**  
West and West, 1908. vol. 3, p. 253, pl. 89, fig. 13

**Dimensions:**  
Cell length - 90 $\mu\text{m}$   
Cell breadth - 62 $\mu\text{m}$   
Isthmus - 13 $\mu\text{m}$

**Comments:**  
Cells medium sized with crenations, presence of series of granules, margins also granulated.

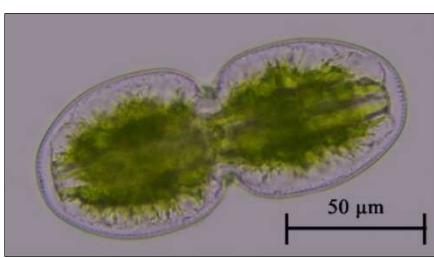

**78. *Cosmarium subundulatum* Wille**  
West and West, 1908. vol. 3, p. 151, pl. 59, fig. 14

**Dimensions:**  
Cell length - 50 $\mu\text{m}$   
Cell breadth - 34 $\mu\text{m}$   
Isthmus - 14 $\mu\text{m}$

**Comments:**  
Cells with row of granules, cell wall margins smooth and two rows of undulations.

**79. *Cosmarium turgidum* Breb. ex Ralfs**  
West and West, 1908. vol. 3, p. 115, pl. 75, fig. 3

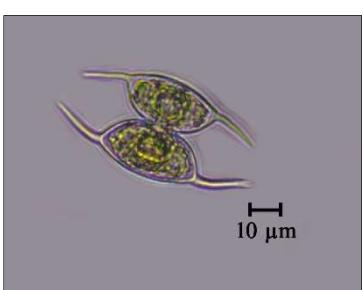

**Dimensions:**  
Cell length - 171 $\mu\text{m}$   
Cell breadth - 79 $\mu\text{m}$   
Isthmus - 38 $\mu\text{m}$

**Comments:**  
Cells large, semicells ovate with broad base, apex rounded.

**Genus: *ARTHRODESMUS* Ehrenberg**

**80. *Arthrodesmus curvatus* var. *latus* Scott and Prescott**  
Scott and Prescott, 1961. p. 76, pl. 33, fig. 7

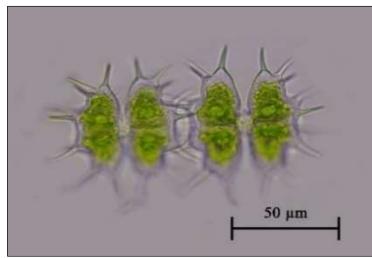

**Dimensions:**  
Cell length - 35 $\mu\text{m}$   
Cell breadth - 68 $\mu\text{m}$   
Isthmus - 12 $\mu\text{m}$

**Comments:**  
Cells medium size, angles acutely rounded with long spines.

**Genus: XANTHIDIUM Ehrenberg**

**81. *Xanthidium sexmammillatum* var. *pulneyense* Iyengar & Bai**  
 Scott and Prescott, 1961. p. 84, pl. 39, fig. 2

**Dimensions:**

Cell length - 38μm

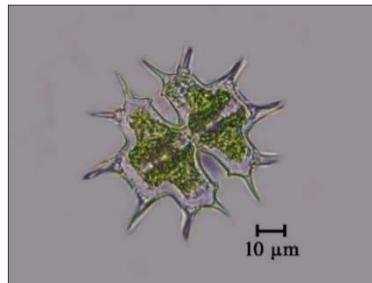

Cell breadth - 45μm

Isthmus - 18μm

**Comments:**

Cells broad with spine, spines 12μm long.

**82. *Xanthidium subtrilobum* var. *inornatum* Skuja**  
 Scott and Prescott, 1961. p. 85, pl. 38, fig. 4

**Dimensions:**

Cell length - 55μm

Cell breadth - 50μm

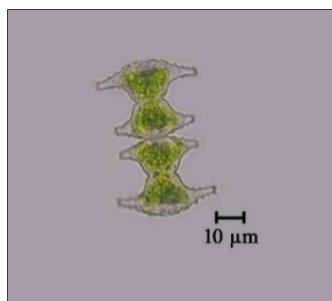

Isthmus - 38μm

**Comments:**

Cells medium size, longer spines, spines 13μm long.

**Genus: STAURASTRUM Meyen**

**83. *Staurastrum crenulatum* (Nag.) Delp.**  
 Scott and Prescott, 1961. p. 88, pl. 59, fig. 10

**Dimensions:**

Cell length - 22μm

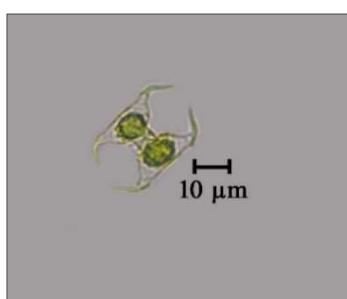

Cell breadth - 32μm

Isthmus - 9μm

**Comments:**

Cells small, deeply constricted, sinus open, cell wall granulated.

**84. *Staurastrum glabrum* Ralfs.**  
 West and West, 1908. vol. 4, p. 129, pl. 143, fig. 15

**Dimensions:**

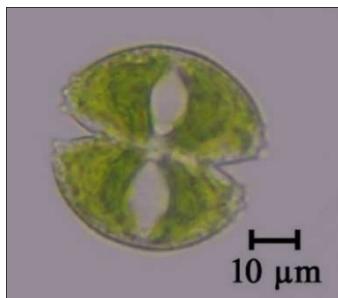

Cell length - 26μm

Cell breadth - 20μm

**Comments:**

Cells very small and deeply constricted, sinus open.

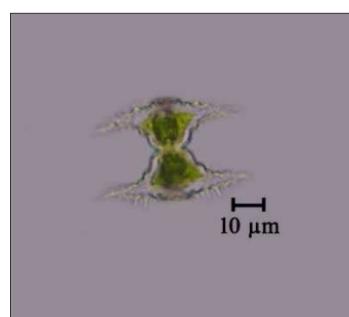

**85. *Staurastrum proboscidium* (Breb) Arch.**  
West and West, 1908. vol. 4, p. 129, pl. 143, fig. 15

**Dimensions:**  
Cell length - 40 $\mu$ m  
Cell breadth - 35 $\mu$ m  
Isthmus - 11 $\mu$ m

**Comments:**  
Cells medium size, truncated apex,  
concentric granules, sinus acute.

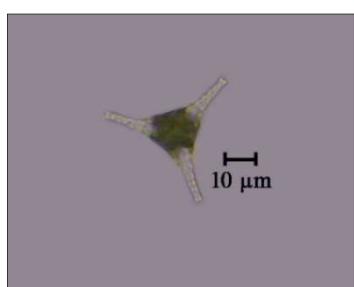

**86. *Staurastrum saltans* var. *polycharax* Scott & Prescott**  
Scott and Prescott, 1961. p. 105, pl. 51, fig. 8

**Dimensions:**  
Cell length - 43 $\mu$ m  
Cell breadth - 30 $\mu$ m  
Isthmus - 9 $\mu$ m

**Comments:**  
Cells with external side convex covered with  
short spines, sinus open.

**87. *Staurastrum* sp. 1**

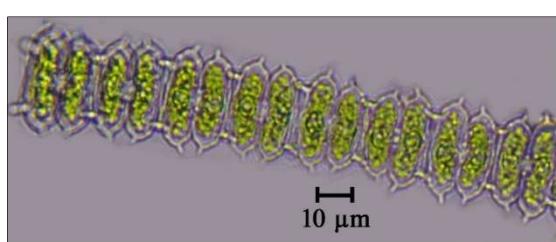

**Dimensions:**  
Cell length - 43 $\mu$ m  
Cell breadth - 13 $\mu$ m  
Isthmus - 1.5 $\mu$ m

**Comments:**  
Cells triangulate, angles prolonged to form  
Short processes.

Genus: ***ONYCHONEMA*** Wallich

**88. *Onychonema laeve* var. *micracanthum* Nordst.**  
Scott and Prescott, 1961. p. 121, pl. 60, fig. 14

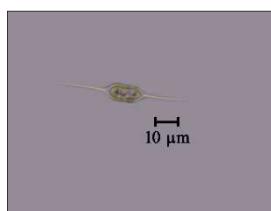

**Dimensions:**  
Cell length - 20 $\mu$ m  
Cell breadth - 19 $\mu$ m  
Isthmus - 5.5 $\mu$ m

**Comments:**  
Cells narrowed and rounded  
and at apex with short spines.

Division : **Chrysophyta**  
 Class : **Xanthophyceae**  
 Order : **Heterococcales**  
 Family : **Centrictractaceae**

Genus: **CENTRITRACTUS** Lemmermann

**89. *Centrictractus belanophorus* (Schmidle) Lemm.**  
 Prescott, 1982. p. 361, pl. 95, figs. 37 & 38

**Dimensions:**

Cell length - 42μm

Cell breadth - 7μm

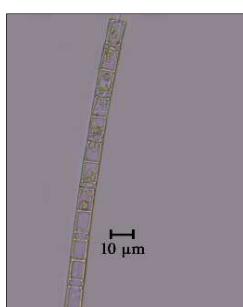

**Comments:**

Cells elongate-cylindric with a long, slender spine at each pole, spines larger than the cell.

Division : **Bacillariophyta**  
 Class : **Bacillariophyceae**  
 Order : **Centrales**  
 Family : **Coscinodiscaceae**

Genus: **AULACOSEIRA** Thwaites

**90. *Aulacoseira granulata* (Ehr.) Simonsen**  
 Sarode and Kamat, 1984. p. 18, pl. 1, fig. 1

**Dimensions:**

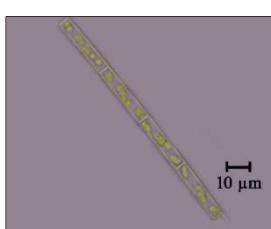

Valve length - 10μm

Valve breadth - 6μm

**Comments:**

Frustules cylindrical and united in chains, end cells with spines, rows of aeroles.

**91. *Aulacoseira granulata* (Ehr.) Simonsen var. *angustissima* (O.Muller) Simonsen**  
 Sarode and Kamat, 1984. p. 18, pl. 1, fig. 2

**Dimensions:**

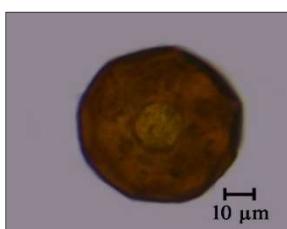

Valve length - 20μm

Valve breadth - 3μm

**Comments:**

Frustules cylindrical and united in chains, end cells with spines.

**92. *Actinocyclus normanii* (Gregory) Hustedt**  
 Desikachary, 1989. P.3, fig. 5

**Dimensions:**

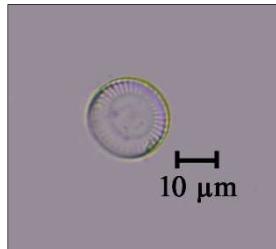

Valve breadth - 3μm

**Comments:**

Valves circular, centric form, shallow mantle, margins striated, small refractive area at valve margin.

Genus: **CYCLOTELLA** Kuetz.

**93. *Cyclotella meneghiniana* f. *meneghiniana*** Kützing  
Sarode and Kamat, 1984. p. 21, pl. 1, fig. 11

**Dimensions:**

Valve length - 42μm

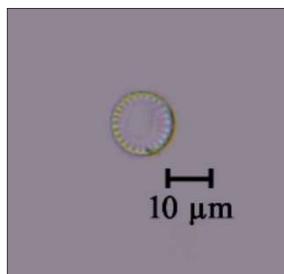

Valve breadth - 7μm

Striae - 8 (10μm)

**Comments:**

Valves discoid, thick wavy margins, central field large and punctate,

**94. *Cyclotella striata*** (Kützing) Grunow  
Sarode and Kamat, 1984. p. 23, pl. 1, fig. 16

**Dimensions:**

Valve breadth - 16μm

Striae - 9 (10μm)

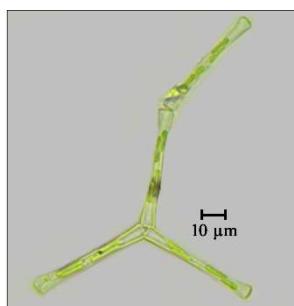

**Comments:**

Valves discoid, large central field.

Order : **Pennales**  
Family : **Fragilariaceae**

Genus: **TABELLARIA** Ehrenberg

**95. *Tabellaria fenestrata*** (Lyngbye) Kützing  
Venkataraman, 1939. p. 303, fig. 35

**Dimensions:**

Valve length - 50μm

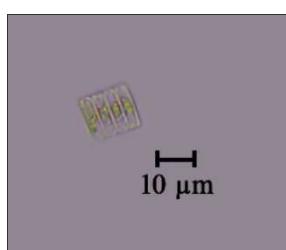

Valve breadth - 4μm

**Comments:**

Valves elongated and forming zigzag chains, inflated in the middle and poles.

Genus: **FRAGILARIA** Lyngbye

**96. *Fragilaria venter* var. *venter*** Ehrenberg  
Sarode and Kamat, 1984. p. 26, pl. 1, fig. 20

**Dimensions:**

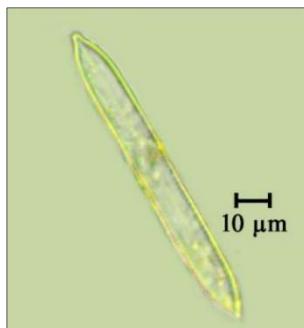

Valve length - 12μm

Valve breadth - 2μm

**Comments:**

Valves attached together to form short chains.

**97. *Fragilaria capucina* var. *vaucheriae* (Kutz.) Lange Bertalot**  
Sarode and Kamat, 1984. p. 27, pl. 1, fig. 21

**Dimensions:**

Valve length - 94μm

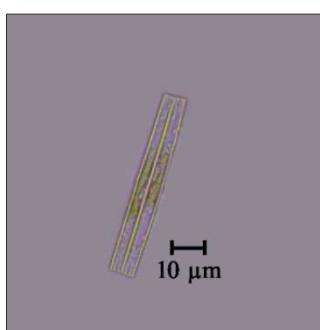

Valve breadth - 8μm

**Comments:**

Valves linear, broad, ends tapering and rounded, axial area narrow.

Genus: ***SYNEDRA*** Ehrenberg

**98. *Synedra familiaris* f. *familiaris* Kutz**  
Sarode and Kamat, 1984. p. 28, pl. 1, fig. 26

**Dimensions:**

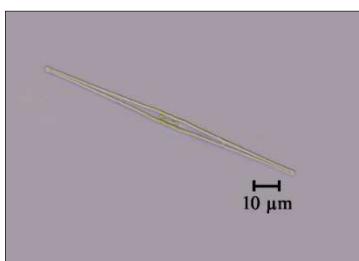

Valve length - 48μm

Valve breadth - 4μm

**Comments:**

Valves centrally constricted.

**99. *Synedra acus* Kuetz.**  
Sarode and Kamat, 1984. p. 30, pl. 2, fig. 32

**Dimensions:**

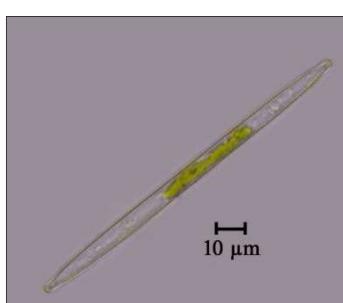

Valve length - 102μm

Valve breadth - 3μm

**Comments:**

Valves linear, narrow needle like subcapitate ends, narrow pseudoraphe, striae indistinct, broad in the middle and tapering towards ends.

**100. *Synedra ulna* (Nitz.) Ehr.**  
Sarode and Kamat, 1984. p. 31, pl. 2, fig. 37

**Dimensions:**

Valve length - 149μm

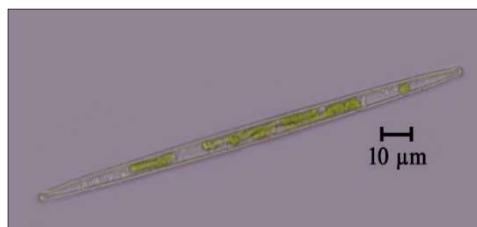

Valve breadth - 5μm

Raphe - 9 (10μm)

**Comments:**

Valves linear lanceolate, ends rounded, narrow pseudoraphe.

**101. *Synedra ulna* var. *subaequalis* Grunow**  
 Sarode and Kamat, 1984. p. 33, pl. 2, fig. 44

**Dimensions:**

Valve length - 197μm

Valve breadth – 6.5μm

Raphe - 9 (10μm)

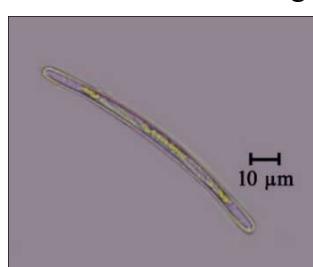

**Comments:**

Valves linear lanceolate, subcapitate ends, narrow pseudoraphe.

Family: Eunotiaceae

Genus: **EUNOTIA** Ehrenberg

**102. *Eunotia lunaris* (Ehr.) Gurnow**  
 Gandhi, 1957. P.49, fig. 14

**Dimensions:**

Valve length - 80μm

Valve breadth - 3μm

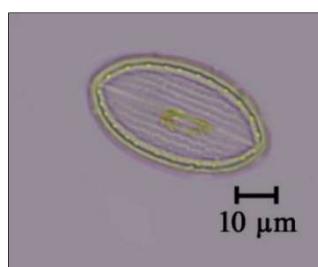

**Comments:**

Valves linear, curved forming arc, small polar nodules with rounded apex.

Family: Achnanthaceae

Genus: **COCCONEIS** Ehrenberg

**103. *Cocconeis placentula* Ehr.**  
 Sarode and Kamat, 1984. p. 49, pl. 4, fig. 95

**Dimensions:**

Valve length - 36μm

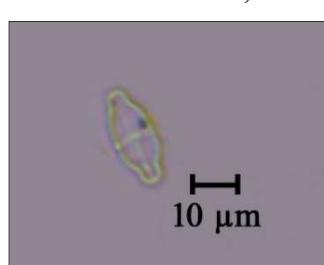

Valve breadth - 21μm

**Comments:**

Valves elliptical, pseudoraphe, many longitudinal wavy hyaline bands present.

Genus: **ACHNANTHES** Bory

**104. *Achnanthes exigua* Grun.**  
 Sarode and Kamat, 1984. p. 53, pl. 5, fig. 108

**Dimensions:**

Valve length - 12μm

Valve breadth - 5μm

**Comments:**

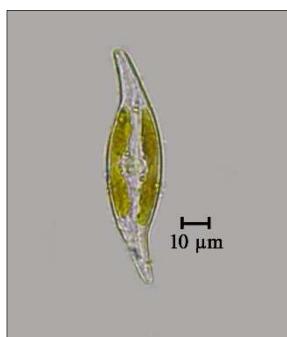

Valves rectangular in middle with rostrate end, raphe thin and straight.

Family: **Naviculaceae**

Genus: **GYROSIGMA** Hassal

**105. *Gyrosigma distortum* var. *parkeri*** Harrison

Sarode and Kamat, 1984. p. 67, pl. 7, fig. 148

**Dimensions:**

Valve length - 78µm

Valve breadth - 17µm

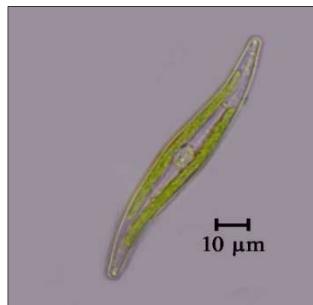

**Comments:**

Valves slightly sigmoid, lanceolate with Protracted ends, axial area narrow.

Genus: **PLEUROSIGMA** W. Smith

**106. *Pleurosigma kuetzingii* f. *kuetzingii*** Gurnow

Sarode and Kamat, 1984. p. 66, pl. 7, fig. 149

**Dimensions:**

Valve length - 91µm

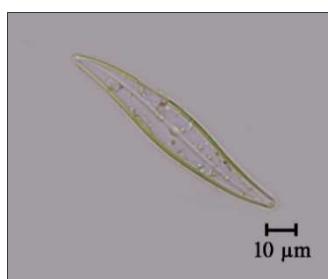

Valve breadth - 12µm

**Comments:**

Valves sigmoid, lanceolate with rounded ends, raphe thick and sigmoid.

**107. *Pleurosigma salinarum* Grun.**

Sarode and Kamat, 1984. p. 70, pl. 8, fig. 157

**Dimensions:**

Valve length - 91µm

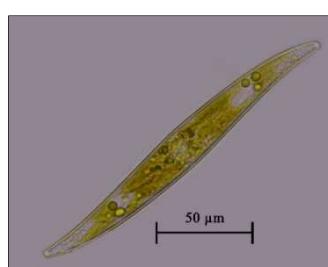

Valve breadth - 14µm

**Comments:**

Valves linear, lanceolate, sigmoid, rounded at poles.

**108. *Pleurosigma elongatum* var. *karianum* (Grun.) Cleve**

Sarode and Kamat, 1984. p. 70, pl. 8, fig. 158

**Dimensions:**

Valve length - 175µm

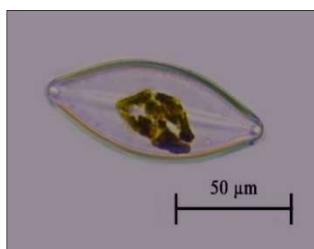

Valve breadth - 18µm

**Comments:**

Valves sigmoid, attenuated and rounded ends, raphe thin, sigmoid.

Genus: **CALONEIS** Cleve

**109. *Caloneis permagna* (Bail.) Cleve**  
Sarode and Kamat, 1984. p. 72, pl. 8, fig. 164

**Dimensions:**

Valve length - 90µm

Valve breadth - 35µm

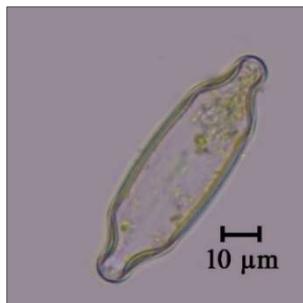

Striae - 13 (10µm)

**Comments:**

Frustules large and lanceolate, rounded ends, raphe thick, terminal fissures curved.

Genus: **NEIDIUM** Pfitzer

**110. *Neidium productum* var. *bombayensis* Gonzalves**  
Sarode and Kamat, 1984. p. 85, pl. 9, fig. 199

**Dimensions:**

Valve length - 75µm

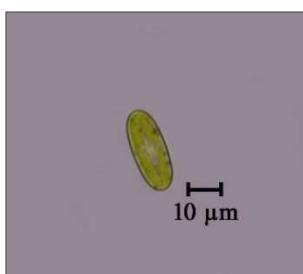

Valve breadth - 20µm

**Comments:**

Valves linear elliptic, thick margins and rounded ends, raphe thin and straight with central nodule.

Genus: **DIPLONEIS** Ehrenberg

**111. *Diploneis ovalis* (Bail.) Cleve**  
Sarode and Kamat, 1984. p. 86, pl. 10, fig. 203

**Dimensions:**

Valve length - 20µm

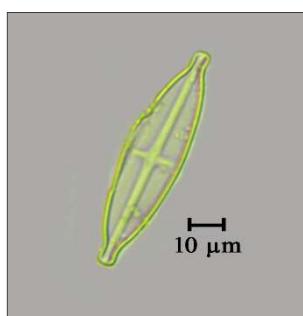

Valve breadth - 10µm

**Comments:**

Valves linear elliptic, raphe with central nodule H shaped.

Genus: **STAURONEIS** Ehrenberg

**112. *Stauroneis anceps* Ehr.**  
Sarode and Kamat, 1984. p. 89, pl. 10, fig. 210

**Dimensions:**

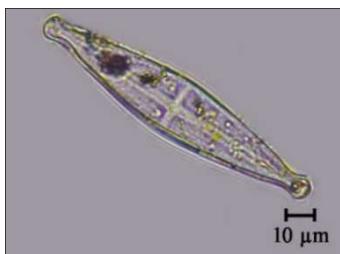

Valve length - 72µm

Valve breadth - 13µm

**Comments:**

Valves elliptic, lanceolate, ends capitate and rounded, raphe thin, central area wide and stauroid.

**113. *Stauroneis anceps* f. *gracilis* (Ehr.) Cleve**  
 Sarode and Kamat, 1984. p. 89, pl. 10, fig. 211

**Dimensions:**

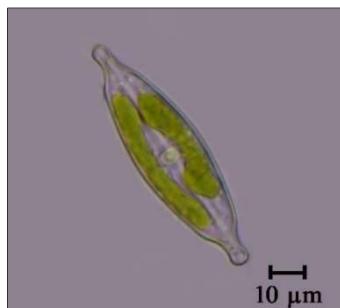

Valve length - 105μm

Valve breadth - 21μm

**Comments:**

Valves lanceolate, ends capitate, rounded, raphe thin.

**114. *Stauroneis phoenicenteron* f. *capitata* Gonzalves et Gandhi**  
 Sarode and Kamat, 1984. p. 93, pl. 11, fig. 224.

**Dimensions:**

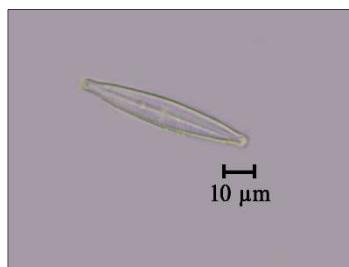

Valve length - 78μm

Valve breadth - 19μm

**Comments:**

Valves lanceolate, rounded capitate ends, thick and straight raphe with central nodules.

**115. *Stauroneis phoenicenteron* f. *producta* Gandhi**  
 Sarode and Kamat, 1984. p. 94, pl. 11, fig. 226

**Dimensions:**

Valve length - 52μm

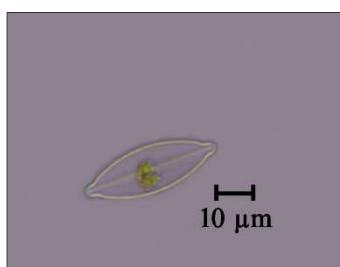

Valve breadth - 9.5μm

**Comments:**

Valves lanceolate and capitate ends, raphe thick and straight with central nodules.

Genus: *NAVICULA* Bory

**116. *Navicula constans* var. *symmetrica* Hustedt**  
 Sarode and Kamat, 1984. p. 106, pl. 12, fig. 253

**Dimensions:**

Valve length - 29μm

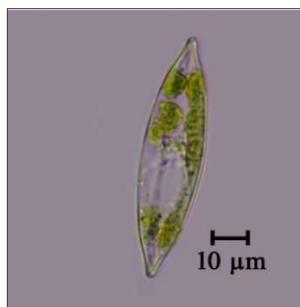

Valve breadth - 11μm

Striae - 13 (10μm)

**Comments:**

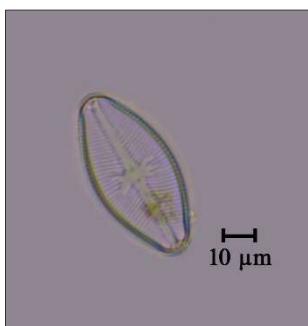

Valves lanceolate with capitate ends, raphe thin with central nodules.

**117. *Navicula cuspidata* Otto Müller**  
Sarode and Kamat, 1984. p. 107, pl. 12, fig. 258

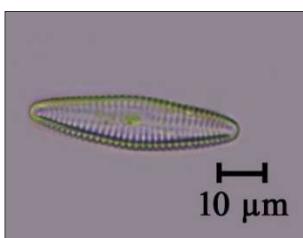

**Dimensions:**  
Valve length - 66 $\mu$ m  
Valve breadth - 15 $\mu$ m  
**Comments:**  
Valves lanceolate with rounded ends at apex.

**118. *Navicula gastrum* Sensu Pantocsek**  
Sarode and Kamat, 1984. p. 111, pl. 13, fig. 272

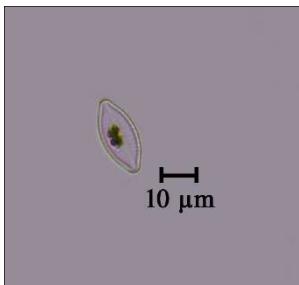

**Dimensions:**  
Valve length - 52 $\mu$ m  
Valve breadth - 21 $\mu$ m  
Striae - 8 (10 $\mu$ m)  
**Comments:**  
Valves elliptic lanceolate, rounded ends with large central area.

**119. *Navicula gracilis* Ehrenberg**  
Sarode and Kamat, 1984. p. 112, pl. 13, fig. 275

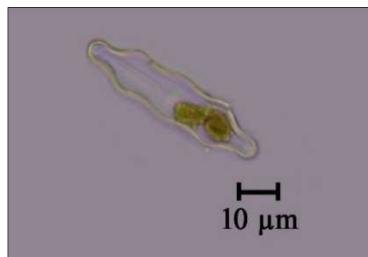

**Dimensions:**  
Valve length - 45 $\mu$ m  
Valve breadth - 10 $\mu$ m  
Striae - 9 (10 $\mu$ m)  
**Comments:**  
Valves linear lanceolate, axial area, rounded ends, raphe thin.

**120. *Navicula laterostrata* Hustedt**  
Sarode and Kamat, 1984. p. 113, pl. 13, fig. 281

**Dimensions:**  
Valve length - 42 $\mu$ m  
Valve breadth - 7 $\mu$ m  
Striae - 12 (10 $\mu$ m)  
**Comments:**  
Valves elliptic lanceolate with rounded ends, raphe thin and straight.

**121. *Navicula mutica* var. *linearis* Gonzalves & Gandhi**  
Sarode and Kamat, 1984. p. 116, pl. 13, fig. 290

**Dimensions:**

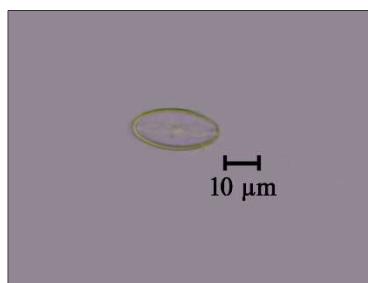

Valve length - 40μm

Valve breadth - 10μm

**Comments:**

Valves linear lanceolate, triundulate margins, rounded and capitate ends, raphe thin and straight, axial area narrow.

**122. *Navicula pygmaea* Kützing**  
Sarode and Kamat, 1984. p. 119, pl. 13, fig. 301

**Dimensions:**

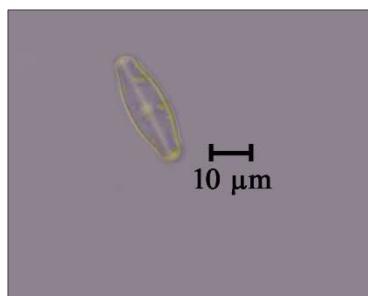

Valve length - 23μm

Valve breadth - 10μm

**Comments:**

Valves elliptic lanceolate with rounded ends, raphe thin with central nodules.

**123. *Navicula pupula* Bristol**  
Sarode and Kamat, 1984. p. 118, pl. 13, fig. 295

**Dimensions:**

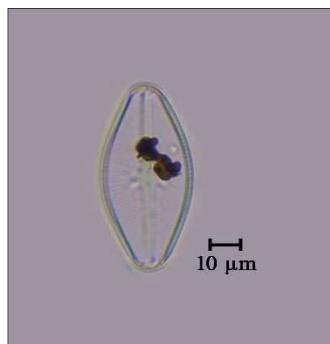

Valve length - 26μm

Valve breadth - 9μm

**Comments:**

Valves linear lanceolate, subcapitate ends, raphe straight with central nodules.

**124. *Navicula pusilla* Sensu Donkin**  
Sarode and Kamat, 1984. p. 119, pl. 13, fig. 300

**Dimensions:**

Valve length - 62μm

Valve breadth - 28μm

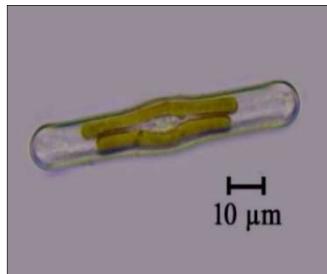

Striae - 10 (10μm)

**Comments:**

Valves elliptic lanceolate with capitate ends, central area wide, raphe thick and curved with central nodules.

Genus: **PINNULARIA** Ehrenberg**125. *Pinnularia acrosphaeria*** W. Smith

Sarode and Kamat, 1984. p. 133, pl. 15, fig. 340

**Dimensions:**

Valve length - 58µm

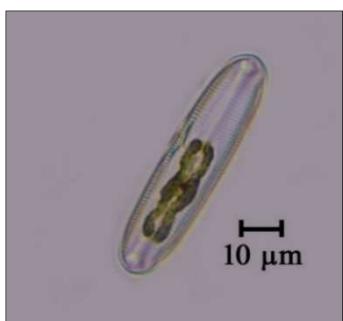

Valve breadth – 9.2µm

**Comments:**

Valves axial area broad and inflated at middle with central nodules.

**126. *Pinnularia divergens* var. *elliptica*** Grunow

Sarode and Kamat, 1984. p. 140, pl. 16, fig. 363

**Dimensions:**

Valve length - 71µm

Valve breadth - 14µm

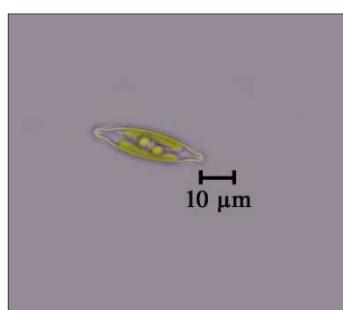

Striae - 10 (10µm)

**Comments:**

Valves linear elliptical with rounded ends, terminal pores curved.

**127. *Pinnularia interrupta* var. *minor*** Cleve-Euler

Sarode and Kamat, 1984. p. 144, pl. 16, fig. 378

**Dimensions:**

Valve length - 28µm

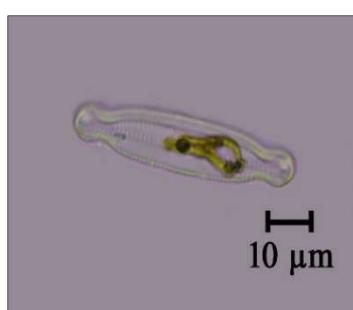

Valve breadth - 8µm

**Comments:**

Valves linear lanceolate, capitate rounded ends, raphe thin.

**128. *Pinnularia lundii*** Hustedt

Sarode and Kamat, 1984. p. 146, pl. 17, fig. 386

**Dimensions:**

Valve length - 50µm

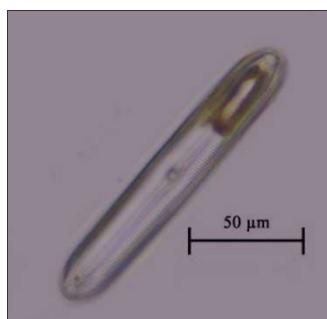

Valve breadth - 10µm

Striae - 13 (10µm)

**Comments:**

Valves lanceolate, capitate rounded ends, curved terminal fissures.

**129. *Pinnularia major* f. *linearis*** (Cleve) Dippel  
Sarode and Kamat, 1984. p. 147, pl. 17, fig. 387

**Dimensions:**

Valve length - 125 $\mu$ m

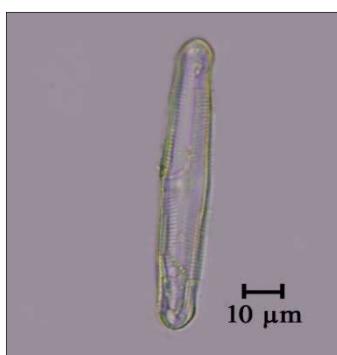

Valve breadth - 18 $\mu$ m

Striae - 8 (10 $\mu$ m)

**Comments:**

Valves linear lanceolate, rounded and capitate ends, raphe thick and complex, unilaterally bend, bayonet shaped.

**130. *Pinnularia panhalgarhensis*** Gandhi  
Sarode and Kamat, 1984. p. 151, pl. 18, fig. 400

**Dimensions:**

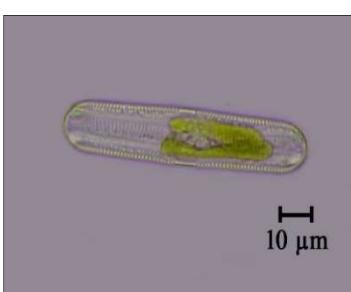

Valve length - 85 $\mu$ m

Valve breadth - 11 $\mu$ m

**Comments:**

Valves linear, constricted ends, curved terminal fissures, raphe unilaterally bent.

**131. *Pinnularia stomatophoroides* var. *ornata*** (A. Cl.) Cl.-Euler  
Sarode and Kamat, 1984. p. 155, pl. 18, fig. 414

**Dimensions:**

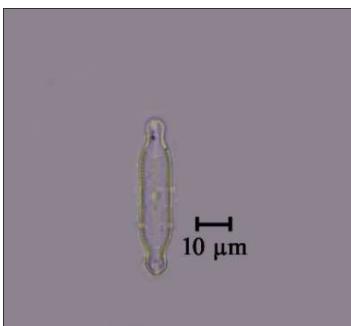

Valve length - 75 $\mu$ m

Valve breadth - 12 $\mu$ m

**Comments:**

Valves linear lanceolate, broadly rounded, capitate ends, raphe thick.

**132. *Pinnularia termis* var. *termitiana*** (Ehr.) A. Cl.  
Sarode and Kamat, 1984. p. 157, pl. 19, fig. 420

**Dimensions:**

Valve length - 45 $\mu$ m

Valve breadth - 8 $\mu$ m

Striae - 12 (10 $\mu$ m)

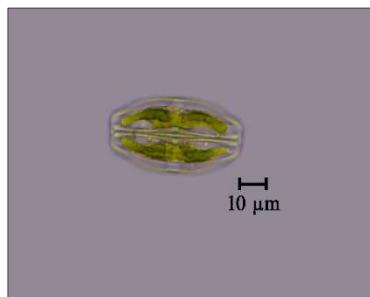

**Comments:**

Valves lanceolate, capitate rounded ends, curved terminal fissures.

Genus: **AMPHORA** Ehrenberg

**133. *Amphora ovalis* f. *gracilis*** Ehrenberg

Sarode and Kamat, 1984. p. 162, pl. 19, fig. 434

**Dimensions:**

Valve length - 52µm

Valve breadth - 25µm

Striae - 11 (10µm)

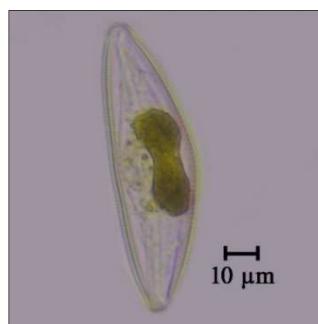

**Comments:**

Valves lunate with convex dorsal side, narrow at axial side.

Genus: **CYMBELLA** Agardh

**134. *Cymbella bengalensis*** Grunow

Sarode and Kamat, 1984. p. 167, pl. 19, fig. 444

**Dimensions:**

Valve length - 84µm

Valve breadth - 25µm

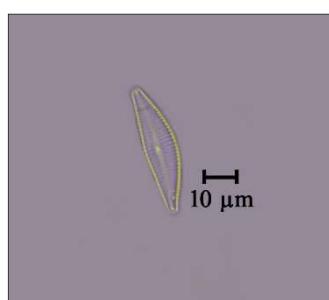

Striae - 9 (10µm)

**Comments:**

Valves asymmetrical, broadly rounded ends, central area large.

**135. *Cymbella signata*** Pantocsek

Sarode and Kamat, 1984. p. 170, pl. 20, fig. 453

**Dimensions:**

Valve length - 36µm

Valve breadth - 9µm

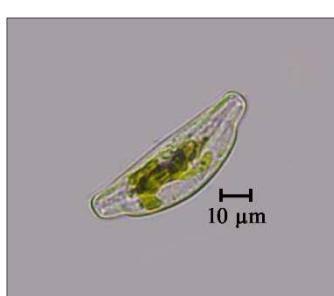

Striae - 11 (10µm)

**Comments:**

Valve ends rounded, dorsal margin convex and ventral margin straight.

**136. *Cymbella laevis*** Nageli

Sarode and Kamat, 1984. p. 171, pl. 20, fig. 455

**Dimensions:**

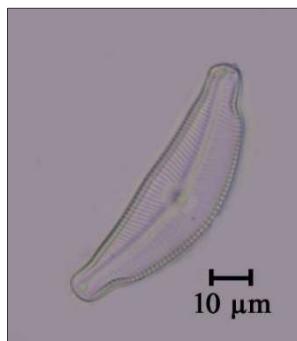

Valve length - 30µm

Valve breadth - 9µm

**Comments:**

Valves curved, dorsal margin convex and ventral margin straight with median expansion, raphe thick.

**137. *Cymbella tumida* (A. Schmidt) Skabichevskii**  
Sarode and Kamat, 1984. p. 176, pl. 20, fig. 468

**Dimensions:**

Valve length - 72μm

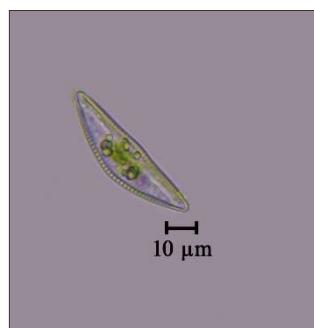

Valve breadth - 20μm

Striae - 12 (10μm)

**Comments:**

Valves asymmetrical and curved, dorsal margin convex, raphe thick.

**138. *Cymbella turgida* Pantocsek**  
Sarode and Kamat, 1984. p. 177, pl. 21, fig. 471

**Dimensions:**

Valve length - 50μm

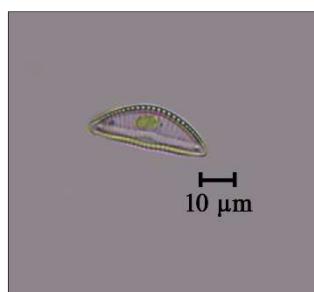

Valve breadth - 12μm

Striae - 8 (10μm)

**Comments:**

Valves lunate, ends acute, rounded.

**139. *Cymbella ventricosa* Kutzning**  
Sarode and Kamat, 1984. p. 178, pl. 21, fig. 473

**Dimensions:**

Valve length - 33μm

Valve breadth - 9μm

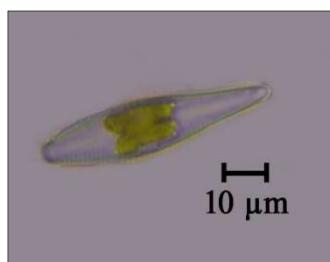

Striae - 10 (10μm)

**Comments:**

Valves straight on the ventral side, ends acute, rounded.

Family: **Gomphonemaceae**Genus: **GOMPHONEMA** Agardh

**140. *Gomphonema aequatoriale* Hustedt**  
Sarode and Kamat, 1984. p. 182, pl. 22, fig. 500

**Dimensions:**

Valve length - 51μm

Valve breadth - 10μm

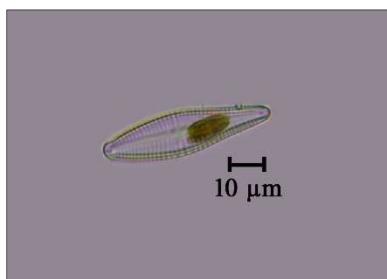

Striae - 9 (10μm)

**Comments:**

Valves clavate, ends rounded at apex.

**141. *Gomphonema gracile* var. *intricatiformis* Mayer**

Sarode and Kamat, 1984. p. 186, pl. 21, fig. 486

**Dimensions:**

Valve length - 55μm

Valve breadth - 10μm

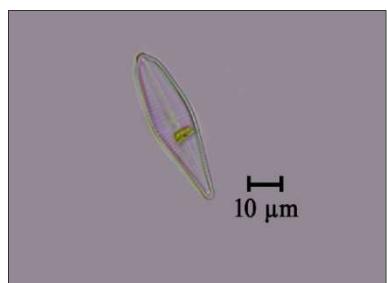

Striae - 12 (10μm)

**Comments:**

Valves lanceolate, ends acutely rounded, central nodules, striae lineate.

**142. *Gomphonema gracile* var. *frickei* Gandhi**

Sarode and Kamat, 1984. p. 185, pl. 21, fig. 498

**Dimensions:**

Valve length - 45μm

Valve breadth - 9μm

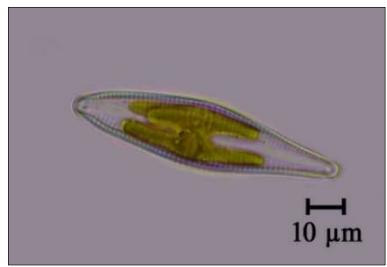

Striae - 8 (10μm)

**Comments:**

Valves lanceolate, apiculate apex, distinct central nodules.

**143. *Gomphonema lacus-rankala* var. *gracilis* Gandhi**

Sarode and Kamat, 1984. p. 190, pl. 22, fig. 512

**Dimensions:**

Valve length - 72μm

Valve breadth - 14μm

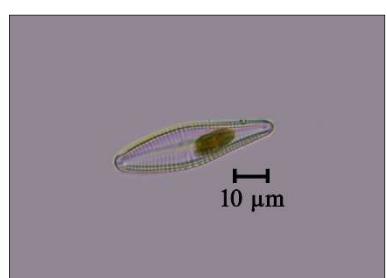

Striae - 9 (10μm)

**Comments:**

Valves lanceolate, apiculate end at apex, striae shortened in the middle.

**144. *Gomphonema montanum* var. *acuminatum* f. *indicum* Sarode & Kamat**

Sarode and Kamat, 1984. p. 193, pl. 23, fig. 524

**Dimensions:**

Valve length - 49μm

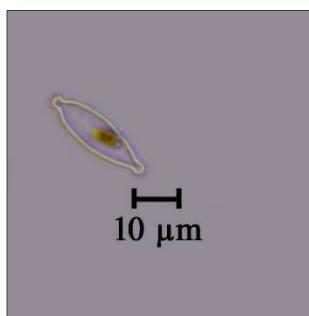

Valve breadth - 11μm

Striae - 8 (10μm)

**Comments:**

Valves lanceolate, slightly constricted at apex, raphe thin and straight.

**145. *Gomphonema parvulum* (Kuetzing) Kutzing**  
Sarode and Kamat, 1984. p. 196, pl. 23, fig. 534

**Dimensions:**

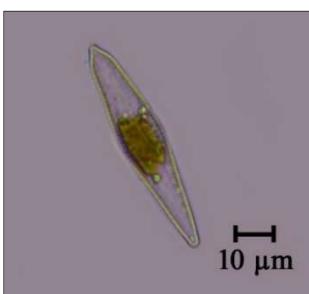

Valve length - 24μm

Valve breadth - 7μm

**Comments:**

Valves clavate, capitate ends at apex, raphe thin and straight.

**146. *Gomphonema subapicatum* Fritsch & Rich**  
Sarode and Kamat, 1984. p. 198, pl. 23, fig. 538

**Dimensions:**

Valve length - 58μm

Valve breadth - 10μm

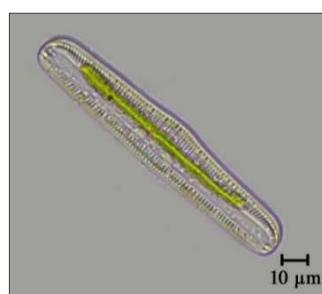

**Comments:**

Valves lanceolate, clavate, subapiculate apex, raphe thin and straight, axial area narrow.

Family: **Epithemiaceae**

Genus: **RHOPALODIA** Muller

**147. *Rhopalodia gibba* (Ehr.) O. Muller**  
Sarode and Kamat, 1984. p. 203, pl. 24, fig. 554

**Dimensions:**

Valve length - 112μm

Valve breadth - 14μm

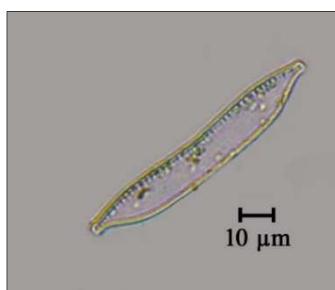

**Comments:**

Valves inflations in the middle, rounded ends.

Family: **Nitzchiaceae**

Genus: **HANTZSCHIA** Grunow

**148. *Hantzschia amphioxys* (Ehr.) Grunow**  
Sarode and Kamat, 1984. p. 206, pl. 24, fig. 562

**Dimensions:**

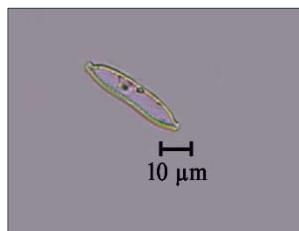

Valve length - 72μm

Valve breadth - 9μm

**Comments:**

Valves ends constricted and capitate, keel punctae 9 in 10μm.

**149. *Hantzschia amphioxys* var. *pusilla* (Gru.) Dippel**  
Sarode and Kamat, 1984. p. 208, pl. 24, fig. 568

**Dimensions:**

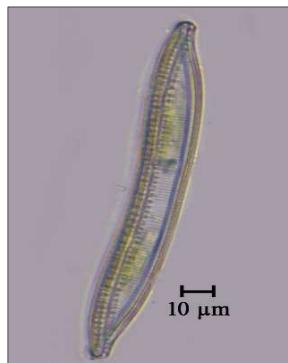

Valve length - 35μm

Valve breadth - 7μm

**Comments:**

Valves ends constricted and narrowed, small keel punctae.

**150. *Hantzschia linearis* (O. Mull.) Cl.- Euler**  
Sarode and Kamat, 1984. p. 209, pl. 25, fig. 574

**Dimensions:**

Valve length - 127μm

Valve breadth - 111μm

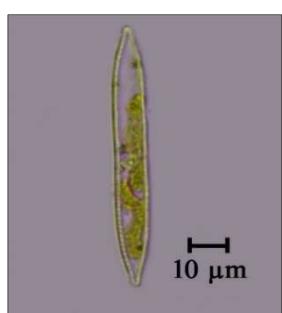

Striae - 13 (10μm)

**Comments:**

Valves linear, ends narrowed and subcapitate.

Genus: ***NITZSCHIA*** Hassal

**151. *Nitzschia apiculata* (Greg.) Grun.**  
Sarode and Kamat, 1984. p. 214, pl. 25, fig. 580

**Dimensions:**

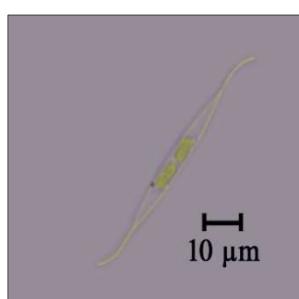

Valve length - 69μm

Valve breadth - 9μm

**Comments:**

Valves linear with apiculate ends.

**152. *Nitzschia closterium* Eulenstei**  
Sarode and Kamat, 1984. p. 215, pl. 25, fig. 584

**Dimensions:**

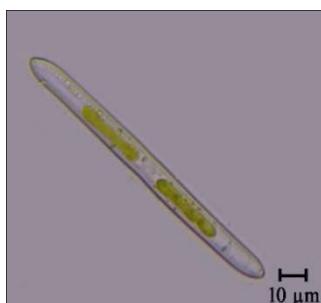

Valve length - 62μm

Valve breadth - 2μm

**Comments:**

Valves long attenuated ends, retracted in opposite directions.

**153. *Nitzschia intermedia*** Hantzsch ex Cleve & Grunow  
Sarode and Kamat, 1984. p. 218, pl. 26, fig. 598

**Dimensions:**

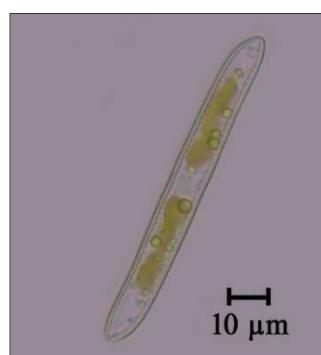

Valve length - 101μm

Valve breadth - 6μm

**Comments:**

Valves linear, lanceolate, subcapitate ends.

**154. *Nitzschia obtusa*** W. Smith  
Sarode and Kamat, 1984. p. 221, pl. 26, fig. 608

**Dimensions:**

Valve length - 75μm

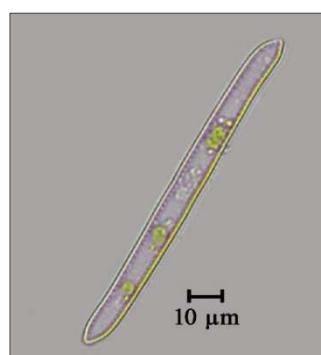

Valve breadth - 9μm

Striae - 9 (10μm)

**Comments:**

Valves linear with rounded ends in opposite directions.

**155. *Nitzschia scalpelliformis*** Grunow  
Sarode and Kamat, 1984. p. 222, pl. 26, fig. 609

**Dimensions:**

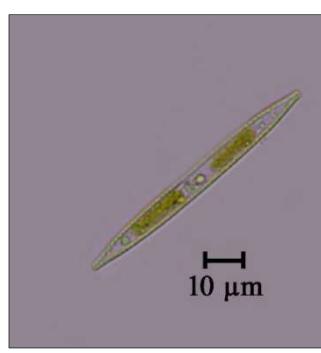

Valve length - 112μm

Valve breadth – 7.5μm

**Comments:**

Valves linear with rounded ends in opposite directions.

**156. *Nitzschia philippinarum*** Hustedt  
Sarode and Kamat, 1984. p. 223, pl. 26, fig. 615

**Dimensions:**

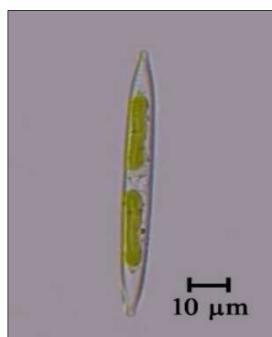

Valve length - 66μm

Valve breadth - 5μm

**Comments:**

Valves lanceolate, narrow capitate rounded ends.

**157. *Nitzschia sublinearis* Hustedt**  
Sarode and Kamat, 1984. p. 225, pl. 26, fig. 623

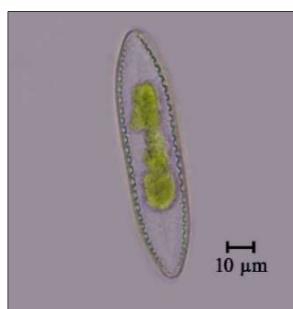

**Dimensions:**  
Valve length - 83 $\mu$ m  
Valve breadth - 6 $\mu$ m  
**Comments:**  
Valves narrow capitate ends, linear lanceolate.

Family: **Surirellaceae**

Genus: **SURIRELLA** Turpin

**158. *Surirella biseriata* Brebisson**  
Sarode and Kamat, 1984. p. 230, pl. 27, fig. 639

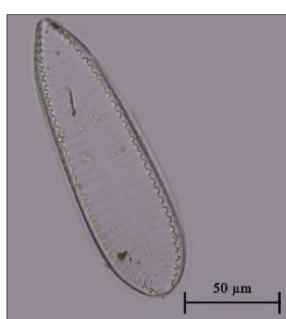

**Dimensions:**  
Valve length - 90 $\mu$ m  
Valve breadth - 20 $\mu$ m  
**Comments:**  
Valves isopolar, acutely rounded ends, linear, lanceolate.

**159. *Surirella capronioides* Gandhi**  
Sarode and Kamat, 1984. p. 231, pl. 27, fig. 642

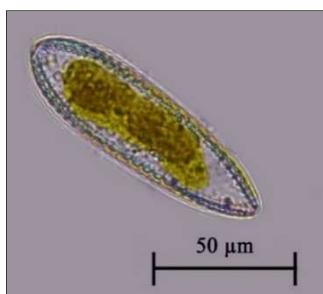

**Dimensions:**  
Valve length - 109 $\mu$ m  
Valve breadth - 47 $\mu$ m  
**Comments:**  
Valves heteropolar, ovate with rounded ends at apex, thick wavy projections from margin.

**160. *Surirella robusta* Ehrenberg**  
Sarode and Kamat, 1984. p. 233, pl. 28, fig. 652

**Dimensions:**  
Valve length - 154 $\mu$ m  
Valve breadth - 31 $\mu$ m  
**Comments:**  
Valves narrowly ovate with rounded apex.

**161. *Surirella tenera* var. *ambigua* Gandhi**  
Sarode and Kamat, 1984. p. 234, pl. 28, fig. 655

**Dimensions:**

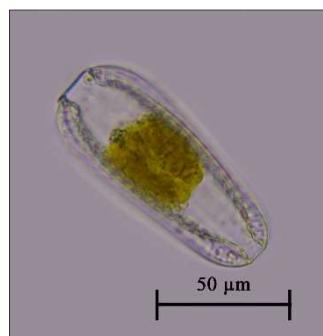

Valve length - 97μm

Valve breadth - 25μm

**Comments:**

Valves heteropolar, striae indistinct, narrowly ovate with rounded apex.

**162. *Surirella tenera* var. *nervosa* A. Schmidt**  
Sarode and Kamat, 1984. p. 234, pl. 28, fig. 656

**Dimensions:**

Valve length - 97μm

Valve breadth - 31μm

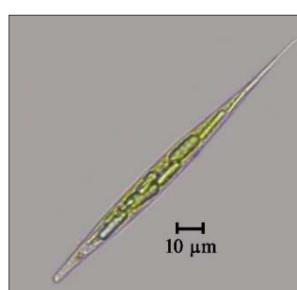

**Comments:**

Valves narrowly ovate with rounded apex.

Division : **Euglenophyta**  
Class : **Euglenophyceae**  
Order : **Euglenales**  
Family : **Euglenaceae**

Genus: **EUGLENA** Ehrenberg

**163. *Euglena acus* (O.F.Muller) Ehr.**  
Philipose, 1984. p.564, fig. 1f

**Dimensions:**

Cell length - 83μm

Cell breadth - 20μm

**Comments:**

Cells elongate, spindle shaped, produced posteriorly into a long, fine tapering point, narrowed and truncate at the anterior end.

**164. *Euglena agilis* Carter**  
Wolowski, 1998. p.27, fig. 78

**Dimensions:**

Cell length - 30μm

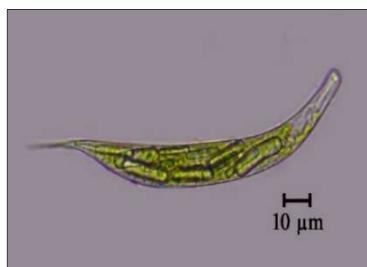

Cell breadth - 13μm

**Comments:**

Cells short, fusiform, chloroplast many with pyrenoids.

**165. *Euglena acus* var. *acus* Starmach**

Wolowski, 1998. p.13, fig. 9

**Dimensions:**

Cell length - 125μm

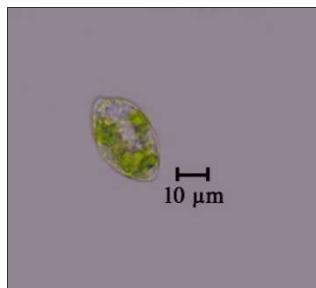

Cell breadth - 10μm

**Comments:**

Cells long, fusiform, narrow at the anterior end, tapering towards posterior.

**166. *Euglena anabaena* var. *anabaena* Mainx**

Wolowski, 1998. p.28, fig. 88

**Dimensions:**

Cell length - 30μm

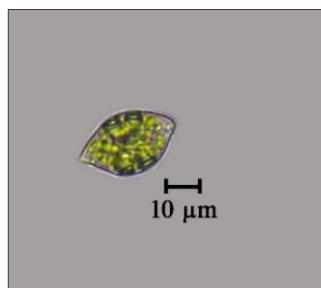

Cell breadth - 19μm

**Comments:**

Cells wide, fusiform, narrowing towards the anterior end.

**167. *Euglena archeoplastidiata* Chadeaud**

Wolowski, 1998. p.25, fig. 66

**Dimensions:**

Cell length - 26μm

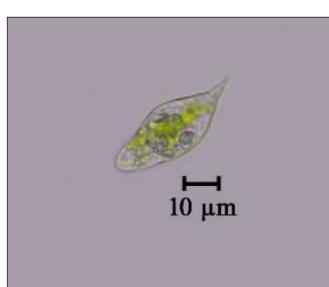

Cell breadth - 13μm

**Comments:**

Cells cylindrical with several chloroplasts, rounded at posterior end.

**168. *Euglena chlamydophora* Mainx**

Wolowski, 1998. p.23, fig. 53

**Dimensions:**

Cell length - 42μm

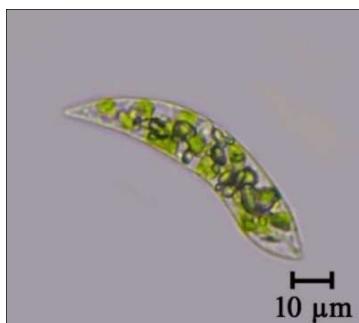

Cell breadth - 20μm

**Comments:**

Cells ovate, rounded at posterior end, slightly longated anterior end.

**169. *Euglena deses* fo. *deses* Pringsheim**

Wolowski, 1998. p.38, fig.125

**Dimensions:**

Cell length - 68μm

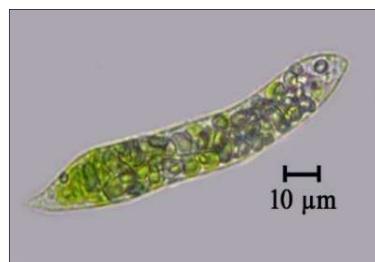

Cell breadth - 12μm

**Comments:**

Cells oblong cylindrical, flattened with many chloroplasts, band shaped, narrow projection at posterior end.

**170. *Euglena deses* Ehrenberg**

Wolowski, 1998. p.39, fig.130

**Dimensions:**

Cell length - 102μm

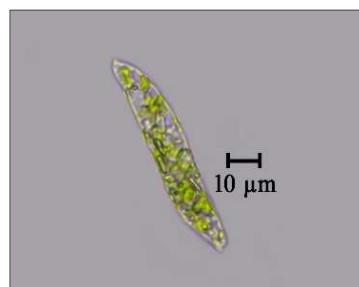

Cell breadth - 12μm

**Comments:**

Cells cylindrical, truncate at the anterior end.

**171. *Euglena deses* f. *klebsii* (Lemmermann) Popova**

Wolowski, 1998. p.38, fig.128

**Dimensions:**

Cell length - 61μm

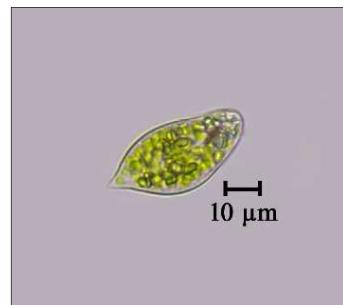

Cell breadth - 10μm

**Comments:**

Cells longitudinally cylindrical, flattened with many chloroplasts.

**172. *Euglena etlii* Wolowski**

Wolowski, 1998. p.26, fig.72

**Dimensions:**

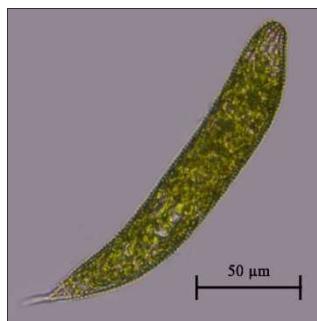

Cell length - 41μm

Cell breadth - 10μm

**Comments:**

Cells wide fusiform, tapering towards anterior end, posterior end with short tail.

**173. *Euglena fusca* (Klebs) Lemm.**  
Philipose, 1984. p.574, fig. 11a

**Dimensions:**

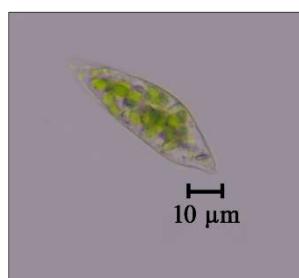

Cell length - 195 $\mu$ m

Cell breadth - 27 $\mu$ m

**Comments:**

Cells slightly bent, posterior end tapering, paramylum present.

**174. *Euglena gracilis* Klebs**  
Prescott, 1982. p. 393, pl. 85, fig. 17; Wolowski, 1998, p.31, fig.99

**Dimensions:**

Cell length - 51 $\mu$ m

Cell breadth - 15 $\mu$ m

**Comments:**

Cells short, fusiform to ovoid, chloroplast disc shaped and many with pyrenoids.

**175. *Euglena hemichromata* Skuja**  
Wolowski, 1998. p.22, fig.49

**Dimensions:**

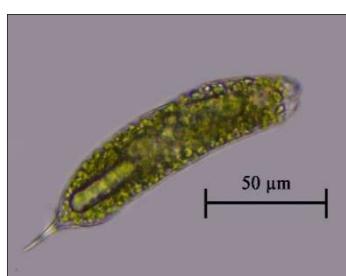

Cell length - 60 $\mu$ m

Cell breadth - 18 $\mu$ m

**Comments:**

Cells spindle-shaped to cylindrical, anterior end rounded, posterior end tapering, presence of spherical to irregular discs.

**176. *Euglena oxyuris* f. *oxyuris* Popova**  
Wolowski, 1998. p.15, fig. 21

**Dimensions:**

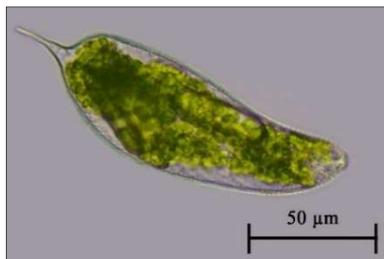

Cell length - 125 $\mu$ m

Cell breadth - 25 $\mu$ m

**Comments:**

Cells slightly twisted, rounded at anterior end, posterior with short tail.

**177. *Euglena oxyuris* var. *charkowiensis* (Swirenko) Bourrelly**  
Philipose, 1984. p.576, fig. 12c

**Dimensions:**

Cell length - 137 $\mu$ m

Cell breadth - 38 $\mu$ m

**Comments:**

Cells broad, posterior with short tail have 24 $\mu$ m in length.

**178. *Euglena oxyuris* var. *playfairii* Bourrelly**  
Philipose, 1984. p.575, fig. 12b

**Dimensions:**

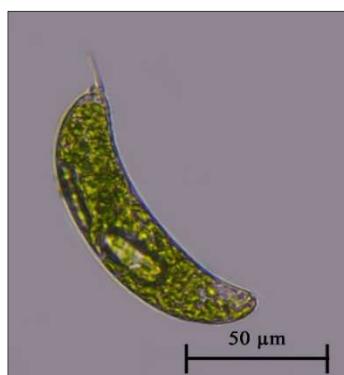

Cell length - 300 $\mu$ m

Cell breadth - 24 $\mu$ m

**Comments:**

Cells with anterior end truncate, posterior with tail.

**179. *Euglena oxyuris* var. *minor* Deflandre**  
Prescott, 1982. p. 393, pl. 85, fig. 18

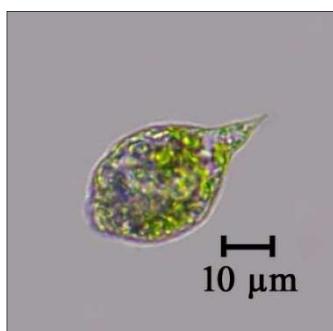

**Dimensions:**

Cell length - 120 $\mu$ m

Cell breadth - 25 $\mu$ m

**Comments:** Cells elongate, cylindrical and twisted, anterior end truncate, posterior end tapering to form short tail.

**180. *Euglena polymorpha* Dangeard**  
Wolowski, 1998. p.31, fig. 98

**Dimensions:**

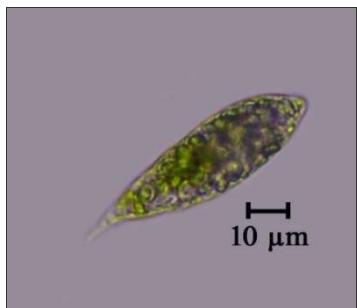

Cell length - 42 $\mu$ m

Cell breadth - 23 $\mu$ m

**Comments:**

Cells fusiform, narrowing and rounded at anterior, short tail at posterior tip.

**181. *Euglena proxima* Dangeard**  
Prescott, 1982. p. 394, pl. 85, fig. 25

**Dimensions:**

Cell length - 61 $\mu$ m

Cell breadth - 15 $\mu$ m

**Comments:**

Cells fusiform, narrowed posteriorly to form a blunt tip, irregularly shaped chloroplasts scattered throughout the cell.

**182. *Euglena rustica* var. *rustica* Huber-Pestalozi**  
Wolowski, 1998. p.21, pl. V11, fig. 45

**Dimensions:**

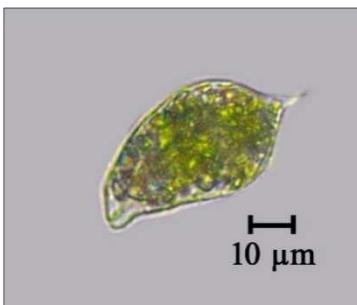

Cell length - 45 $\mu$ m

Cell breadth - 12 $\mu$ m

**Comments:**

Cells wide, sac like, elongated at anterior end, rounded at posterior end.

**183. *Euglena sanguinea* Ehrenberg**  
Wolowski, 1998. p.34, fig. 113

**Dimensions:**

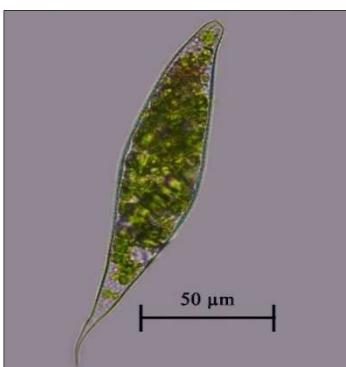

Cell length - 55 $\mu$ m

Cell breadth - 28 $\mu$ m

**Comments:**

Cells fusiform, rounded at anterior end, tapering at posterior end.

**184. *Euglena* sp. 1**

**Dimensions:**

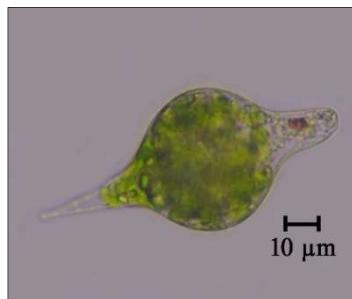

Cell length - 151 $\mu$ m

Cell breadth - 30 $\mu$ m

**Comments:**

Cells elongated, narrowed posteriorly and form a sharp bend tail, striated with alternating rows of granules.

**185. *Euglena* sp. 2**

**Dimensions:**

Cell length - 89µm

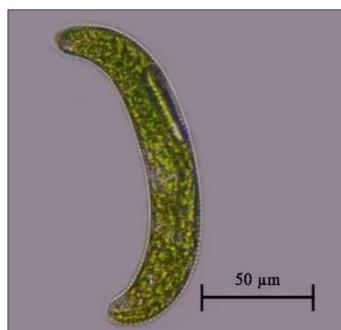

Cell breadth - 50µm

**Comments:**

Cells elongated, rounded at median, narrowed posteriorly with sharp tail.

**186. *Euglena spiropyra* var. *spiropyra* Klebs**

Wolowski, 1998. p.17, fig. 28

**Dimensions:**

Cell length - 140µm

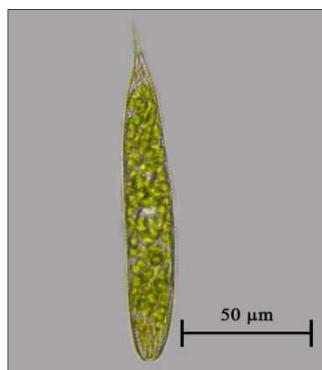

Cell breadth - 19µm

**Comments:**

Cells elongated, curved, longitudinally cylindrical and narrowed posteriorly.

**187. *Euglena spiropyra* Ehrenberg**

Prescott, 1982. p. 394, pl. 86, fig. 15

**Dimensions:**

Cell length - 108µm

Cell breadth - 19µm

**Comments:**

Cells cylindrical and twisted, narrowed posteriorly and form a sharp bend tail, spirally striated with alternating rows of granules.

**188. *Euglena splendens* Dangeard**

Wolowski, 1998. p.33, pl. V11, fig. 110

**Dimensions:**

Cell length - 65µm

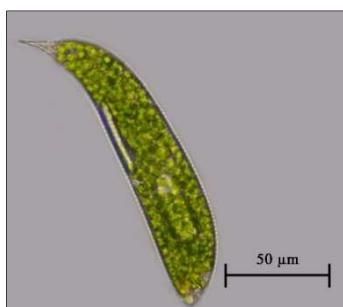

Cell breadth - 23µm

**Comments:**

Cells cylindrical, rounded at anterior end, tapering towards posterior with short projection.

**189. *Euglena tripteris* var. *tripteris* Klebs**

Wolowski, 1998. p.19, fig. 337

**Dimensions:**

Cell length - 147 $\mu$ m

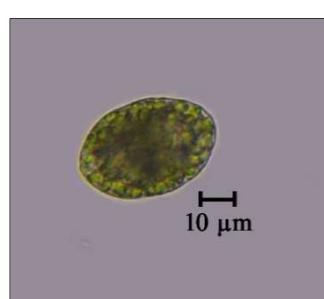

Cell breadth - 26 $\mu$ m

**Comments:**

Cells narrowed at anterior end, slightly rounded at posterior end, tapering into a short sharp tail.

**190. *Euglena texta* var. *texta* (starmach) Hubner**

Wolowski, 1998. p.35, pl. V11, fig. 116

**Dimensions:**

Cell length - 35 $\mu$ m

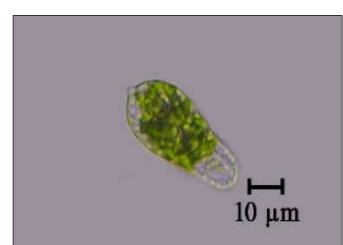

Cell breadth - 16 $\mu$ m

**Comments:**

Cells elongate-cylindric and rounded at anterior end.

**191. *Euglena viridis* f. *Viridis* (Popova) Ehrenberg**

Wolowski, 1998. p.35, pl. V11, fig. 116

**Dimensions:**

Cell length - 35 $\mu$ m

Cell breadth - 16 $\mu$ m

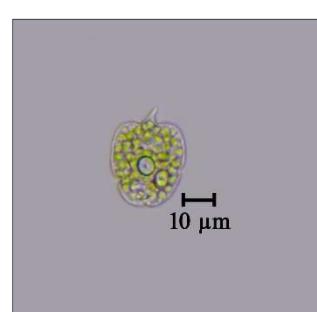

**Comments:**

Cells elongate-cylindric and rounded at anterior end.

Genus: ***PHACUS*** Dujardin

**192. *Phacus anacoelus* Stokes**

Prescott, 1982. p. 397, pl. 87, fig. 7

**Dimensions:**

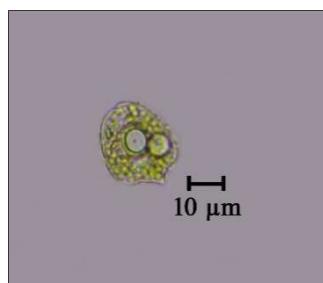

Cell length - 36 $\mu$ m

Cell breadth - 29 $\mu$ m

**Comments:**

Cells ovoid, anterior end broadly rounded, chloroplast numerous, short caudus in posterior, paramylon bodies present.

**193. *Phacus curvicauda* Svirenko**  
Prescott, 1982. p. 399, pl. 87, fig. 14

**Dimensions:**

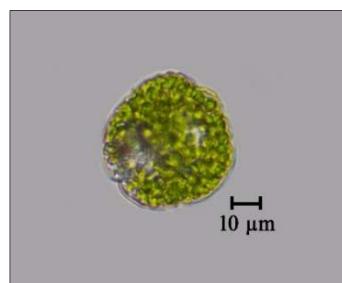

Cell length - 27μm

Cell breadth - 23μm

**Comments:**

Cells ovoid, anterior end broadly rounded, chloroplast numerous.

**194. *Phacus lefevrei* Bourelly**  
Philipose, 1984. p.520, fig. 12

**Dimensions:**

Cell length - 48μm

Cell breadth - 47μm

**Comments:**

Cells ellipsoid with both ends rounded, broad, posterior end broader with larger swelling, numerous paramylum.

**195. *Phacus orbicularis* Huebner**  
Philipose, 1984. p.529, fig. 30

**Dimensions:**

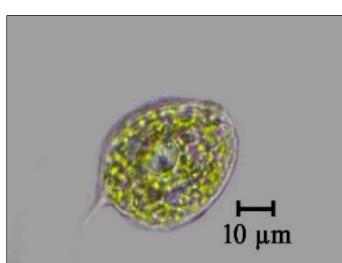

Cell length - 110μm

Cell breadth - 90μm

**Comments:**

Cells circular, short tail, which is bent, numerous transverse striae, two paramylum, one large and in center.

**196. *Phacus orbicularis* f. *communis* Popova**  
Wolowski, 1998. p.76, fig. 260

**Dimensions:**

Cell length - 47μm

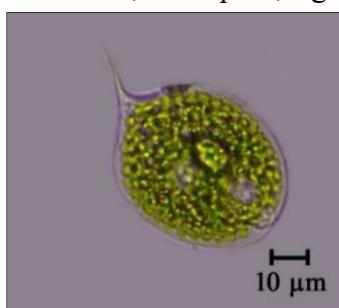

Cell breadth - 28μm

**Comments:**

Cells wide, oval with posterior caudus.

**197. *Phacus orbicularis* f. *orbicularis* Hubner**

Wolowski, 1998. p.76, fig. 260

**Dimensions:**

Cell length - 62μm

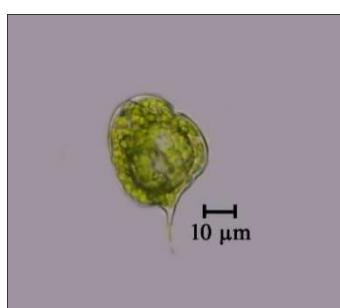

Cell breadth - 35μm

**Comments:**

Cells wide, oval with long curved posterior caudus.

**198. *Phacus pseudoswirenkoi* Prescott**

Prescott, 1982. P. 402, pl. 85, fig. 26

**Dimensions:**

Cell length - 45μm

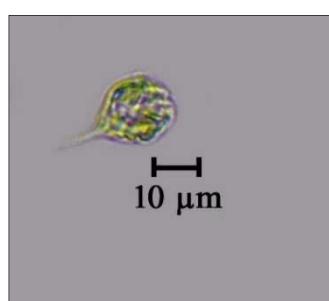

Cell breadth - 27μm

**Comments:**

Cells with posterior caudus short, sharp and curved, anterior end broadly rounded with large circular disc.

**199. *Phacus splendens* Pochmann**

Wolowski, 1998. p.86, fig. 303

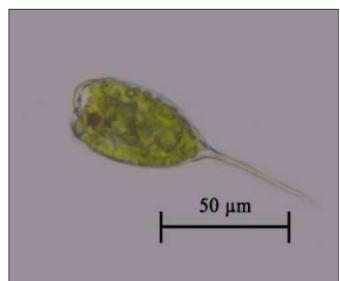

**Dimensions:**

Cell length - 26μm

Cell breadth – 12.5μm

**Comments:**

Cells ovoid, narrowing towards posterior end with short conical cauda.

**200. *Phacus* sp.1****Dimensions:**

Cell length - 54μm

Cell breadth - 27μm

**Comments:**

Cells with large eye spot, narrowing towards posterior end with long conical cauda.

**201. *Phacus* sp.2****Dimensions:**

Cell length - 160μm

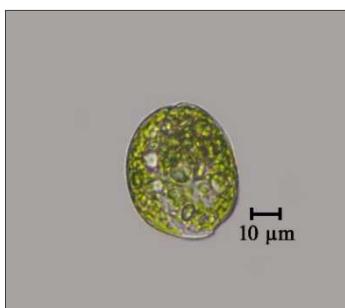

Cell breadth - 125μm

**Comments:**

Cells large, circular, narrowing towards posterior end with conical cauda.

**202. *Phacus stokesii* Lemmermann**

Wolowski, 1998. p.70, fig. 220

**Dimensions:**

Cell length - 42μm

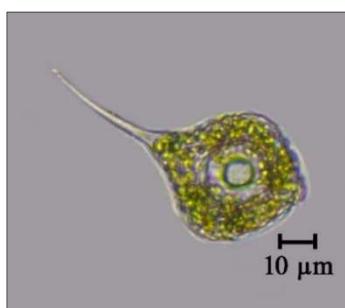

Cell breadth - 36μm

**Comments:**

Cells ovoid, irregularly heart shaped and chloroplast numerous.

**203. *Phacus tortus* (Lemm) Skvortzov**

Philipose, 1984. p.540, fig. 40

**Dimensions:**

Cell length - 82μm

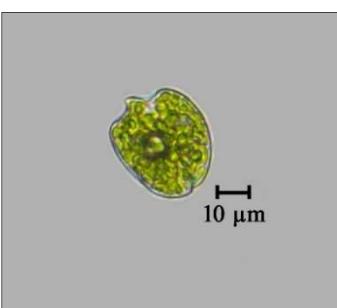

Cell breadth - 33μm

**Comments:**

Cells ovoid, anteriorly and posteriorly narrowed with long straight tail.

**204. *Phacus viguieri* Allorge & lefeuvre**

Wolowski, 1998. p.82, fig. 285

**Dimensions:**

Cell length - 26μm

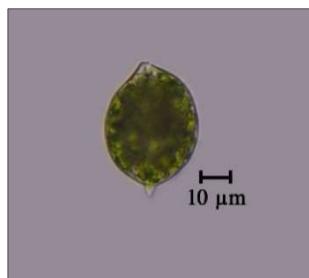

Cell breadth - 23μm

**Comments:**

Cells widely ovate, short cauda, tail alone 32μm, ovoid, anteriorly and posteriorly narrowed with long straight tail,

Genus: ***LEPOCINCLIS*** Perty**205. *Lepocinclis fusiformis* (Carter) Lemm.**

Philipose, 1984. p.512, fig. 7a

**Dimensions:**

Cell length - 44µm

Cell breadth - 27µm

**Comments:**

Cells broadly ovoid, obtuse ends, posterior end with a short caudus.

**206. *Lepocinclis ovum* var. *ovum* Starmach**

Wolowski, 1998. p.66, fig. 210

**Dimensions:**

Cell length - 37µm

Cell breadth - 23µm

**Comments:**

Cells broadly ovoid, end broadly rounded, posterior end with caudus.

**207. *Lepocinclis playfairiana* Deflandre**

Prescott, 1982. p. 407, pl. 89, fig.16

**Dimensions:**

Cell length - 48µm

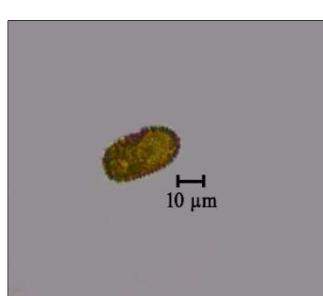

Cell breadth - 26µm

**Comments:**

Cells oval with short caudus, short rounded apex at anterior, slight invagination on lower side.

Genus: ***TRACHELOMONAS*** Ehrenberg**208. *Trachelomonas abrupta* Svirenko**

Prescott, 1982. p. 410, pl. 83, fig. 18

**Dimensions:**

Cell length - 27µm

Cell breadth - 15µm

**Comments:**

Cell broadly oval, wall coarsely punctate, truncate at the anterior end.

**209. *Trachelomonas armata* (Ehr.) Stein.**

Prescott, 1982. p. 410, pl. 83, fig. 32

**Dimensions:**

Cell length - 25μm

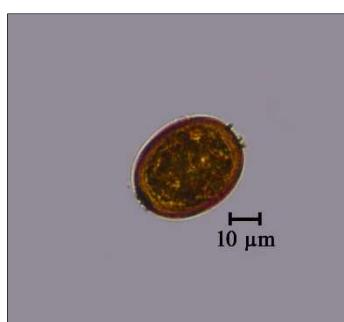

Cell breadth - 35μm

**Comments:**

Cell broadly ovate and flagellum aperture in a collar.

**210. *Trachelomonas armata* var. *longispina* Playfair**

Prescott, 1982. p. 411, pl. 83, fig. 27

**Dimensions:**

Cell length - 40μm

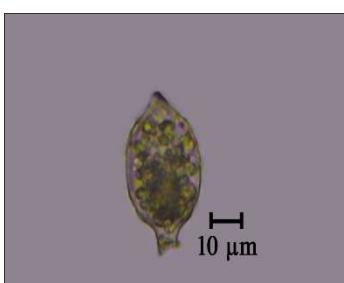

Cell breadth - 29μm

**Comments:**

Cell obovate, reddish brown, with collar, posterior end short spines.

**211. *Trachelomonas caudata* f. *caudata* Starmach**

Wolowski, 1998. p.64, fig. 204

**Dimensions:**

Cell length - 40μm

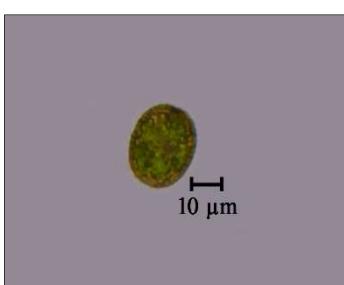

Cell breadth - 23μm

**Comments:**

Cell elliptical, collar 4μm high, posterior end conical and caudate.

**212. *Trachelomonas dybwoskii* Drezepolski ex Deflandre**

Prescott, 1982. p. 412, pl. 83, fig.21

**Dimensions:**

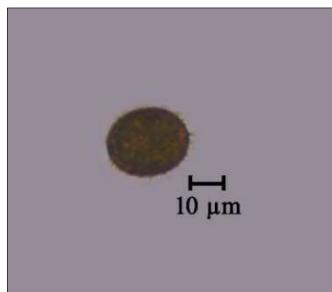

Cell length - 25μm

Cell breadth - 19μm

**Comments:**

Cell elliptical, flagellum opening without a collar, wall smooth.

**213. *Trachelomonas globularis* f. *Globularis* Lemmermann**  
Wolowski, 1998. p.49, fig. 176

**Dimensions:**

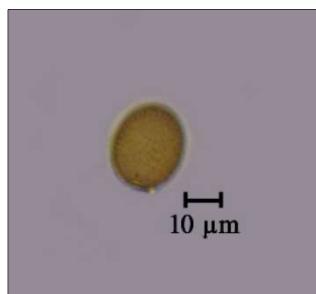

Cell length - 19 $\mu$ m

Cell breadth - 25 $\mu$ m

**Comments:**

Cell globular, covered with short thick spines, reddish brown.

**214. *Trachelomonas granulosa* Playfair**  
Philipose, 1988. p.357, fig. 31a

**Dimensions:**

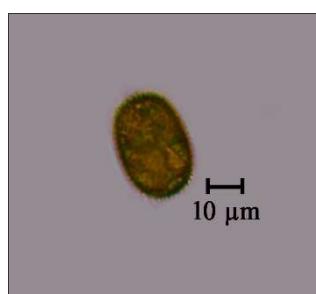

Cell length - 20 $\mu$ m

Cell breadth - 25 $\mu$ m

**Comments:**

Cell ellipsoid with densely crowded granulations, depressed collar, reddish brown.

**215. *Trachelomonas hispida* (Perty) Stein**  
Philipose, 1988. p.344, fig. 8a

**Dimensions:**

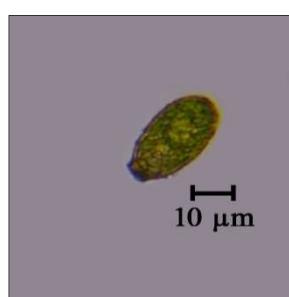

Cell length - 15 $\mu$ m

Cell breadth - 24 $\mu$ m

**Comments:**

Cell ellipsoid, covered with short spines, very much depressed collar with few spines, reddish brown.

**216. *Trachelomonas lacustris* Drezepolski**  
Prescott, 1982. p. 415, pl. 83, fig. 15

**Dimensions:**

Cell length - 27 $\mu$ m

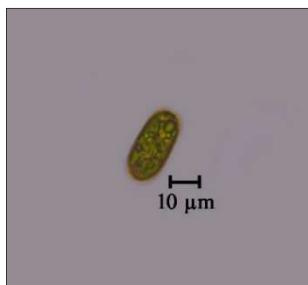

Cell breadth - 12 $\mu$ m

**Comments:**

Cell cylindrical, flagellum aperture without collar, slightly raised rim, wall punctate, golden yellow brown.

**217. *Trachelomonas klebsii* Deflandre**

Wolowski, 1998. p.54, fig. 181

**Dimensions:**

Cell length - 26 $\mu$ m

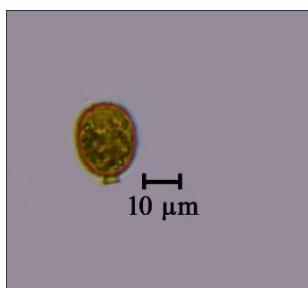

Cell breadth - 13 $\mu$ m

**Comments:**

Cell cylindrical, covered with short spines, cylindrical, covered with short spines, without collar, yellowish brown.

**218. *Trachelomonas planctonica* f. *ornata* Skvortzov**

Wolowski, 1998. p.62, fig. 199

**Dimensions:**

Cell length - 23 $\mu$ m

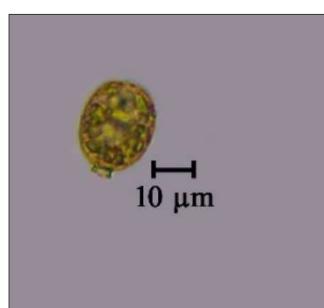

Cell breadth - 15 $\mu$ m

**Comments:**

Cell elliptical covered with spores, collar with irregular rim.

**219. *Trachelomonas planctonica* f. *Planctonica* Swirensko**

Wolowski, 1998. p.62, fig. 197

**Dimensions:**

Cell length - 22 $\mu$ m

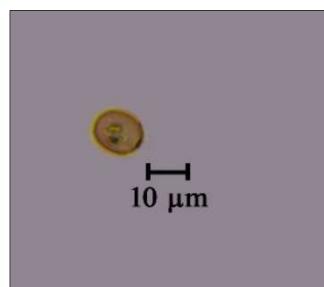

Cell breadth - 16 $\mu$ m

**Comments:**

Cell elliptical covered with spores and granules, reddish brown in colour with dentate collar.

**220. *Trachelomonas oblonga* var. *minor* (Playfair) Taskin & Alp**

Prescott, 1951. p. 416, pl. 83, fig. 24

**Dimensions:**

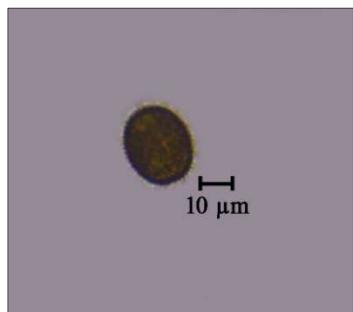

Cell length - 12 $\mu$ m

Cell breadth - 10 $\mu$ m

**Comments:**

Cell elliptic, flagellum aperture without a collar, wall brown, smooth.

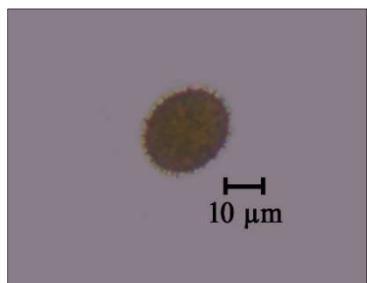

**221. *Trachelomonas robusta* Svirenko**  
Prescott, 1951. p. 416, pl. 83, fig. 29

**Dimensions:**  
Cell length - 23 $\mu$ m  
Cell breadth - 18 $\mu$ m

**Comments:**  
Cell oval without collar, sharp spines throughout the surface.

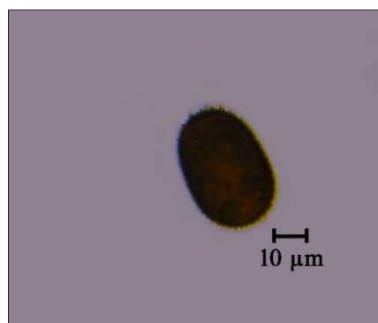

**222. *Trachelomonas* sp.1**

**Dimensions:**  
Cell length - 26 $\mu$ m  
Cell breadth - 20 $\mu$ m

**Comments:**  
Cell oval with short collar, small, pointed spines interspersed throughout the surface.

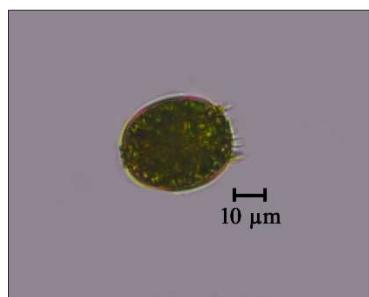

**223. *Trachelomonas superba* var. *duplex* Deflandre**  
Prescott, 1951. p. 417, pl. 84, fig. 11

**Dimensions:**  
Cell length - 37 $\mu$ m  
Cell breadth - 28 $\mu$ m

**Comments:**  
Cell oval with spines throughout the surface.

**224. *Trachelomonas superba* var. *Swirenkiana* Deflandre**  
Prescott, 1951. p. 418, pl. 83, fig. 34

**Dimensions:**  
Cell length - 40 $\mu$ m  
Cell breadth - 30 $\mu$ m

**Comments:**  
Cell globose, ring like collar, posterior with longer and stouter spines.

**225. *Trachelomonas varians* Deflandre**  
Philipose, 1988. p.330, fig. 73

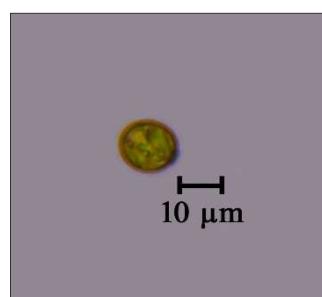

**Dimensions:**

Cell length - 24μm

**Comments:**

Cell spherical, smooth and dark reddish brown, pore 3μm.

**226. *Trachelomonas volvocina* (Ehr.) Ehrenberg**  
Prescott, 1982. p. 419, pl. 83, fig. 1

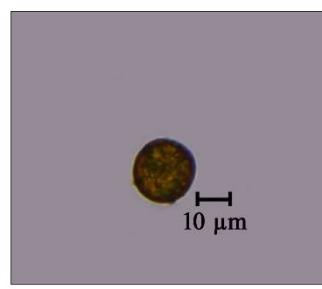

**Dimensions:**

Cell length - 12μm

**Comments:**

Cell with depressed collar, wall smooth, yellowish brown, pore 1.5μm.

**227. *Trachelomonas volvocinopsis* Svirenko**  
Wolowski, 1998. p.48, fig. 173

**Dimensions:**

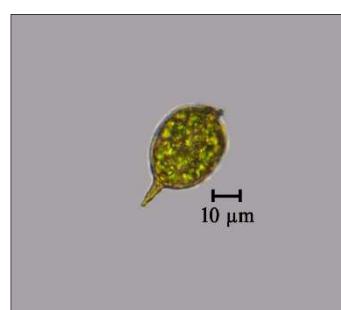

Cell length - 16μm

**Comments:**

Cell wall smooth and brown, many chromatophores.

Genus: **STROMBOMONAS** Deflandre

**228. *Strombomonas fluviatilis* (Lemm.) Defl.**  
Islam and Irfanullah, 2005a. pl. 3, fig. 44

**Dimensions:**

Cell length - 43μm

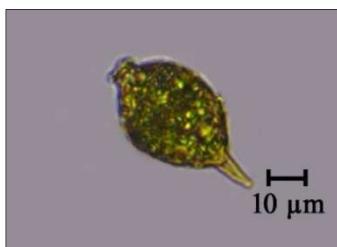

Cell breadth - 25μm

**Comments:**

Cell with tail, lorica light brown colour.

**229. *Strombomonas girardiana* (Playf.) Defl.**

Philipose, 1988. p.379, fig. 53

**Dimensions:**

Cell length - 42μm

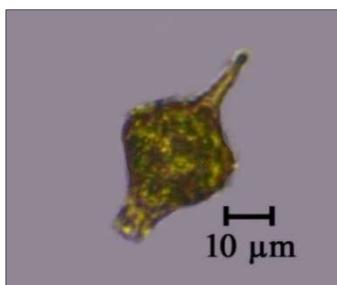

Cell breadth - 23μm

**Comments:**

Cell light brown colour, tail short.

**230. *Strombomonas gibberosa* (Playf.) Defl.**

Philipose, 1988. p.385, fig. 62b

**Dimensions:**

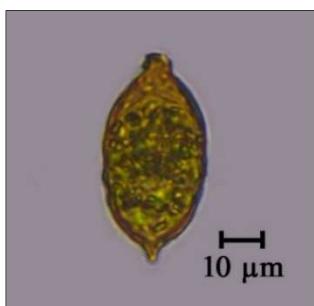

Cell length - 48μm

Cell breadth - 25μm

**Comments:**

Cell rhomboid with median angular, lorica light brown colour.

**231. *Strombomonas* sp.1**

**Dimensions:**

Cell length - 50μm

Cell breadth - 25μm

**Comments:**

Cell rhomboid, posterior end with short cauda, lorica light brown colour.

Division : **Pyrrhophyta**

Class : **Dinophyceae**

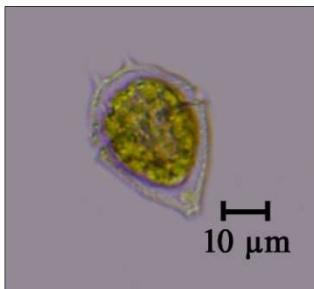

Order : **Peridiniales**

Family : **Glenodiniaceae**

Genus: **PERIDINIOPSIS** (Ehrenberg.) Stein

**232. *Peridiniopsis quadridentata* (Stein) Bourrelly**

Prescott, 1982. p. 430, pl. 90, fig. 19

**Dimensions:**

Cell length - 32μm

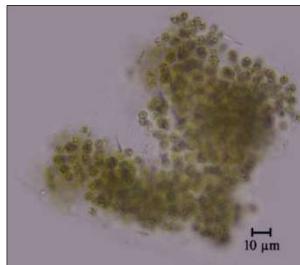

Cell breadth - 25μm

**Comments:**

Cells ovate, hypocone rounded with 2 short sharp spines, transverse furrow which equally dividing the cell.

Division : **Cyanophyta**  
 Class : **Cyanophyceae**  
 Order : **Chroococcales** wettstein  
 Family : **Chroococcaceae** naegeli  
 Genus: **MICROCYSTIS** Kuetzing

**233. *Microcystis aeruginosa* (Kützing) Kützing**  
 Komarek, 2013. p. 232, fig. 304

**Dimensions:**

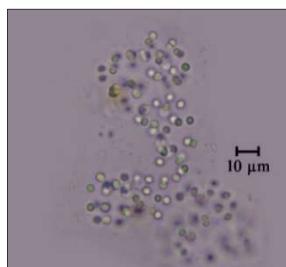

Cell breadth - 7 µm

**Comments:**

Cells spherical, colonies with large number of irregularly arranged cells.

Genus: **CHROOCOCCUS** Nageli

**234. *Chroococcus minimus* (Keissler) Lemm.**  
 Komarek, 2013. p. 286, fig. 371

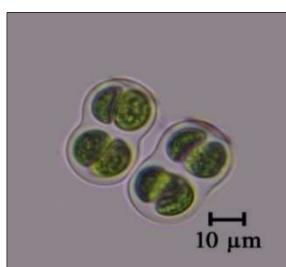

**Dimensions:**

Cell breadth - 2 µm

**Comments:**

Cells spherical, pale blue green, arranged in small groups.

**235. *Chroococcus minutus* (Kutzing) Nag.**  
 Komarek, 2013. p. 296, fig. 391

**Dimensions:**

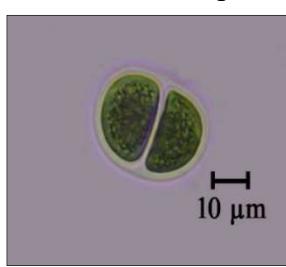

Cell breadth - 10 µm

Colony length - 30 µm

**Comments:**

Cells hemispherical, granulate content, colonies enclosed by colourless sheath.

**236. *Chroococcus turgidus* (Kuetz.) Nag.**  
 Komarek, 2013. p. 306, fig. 407

**Dimensions:**

Cell length - 12 µm

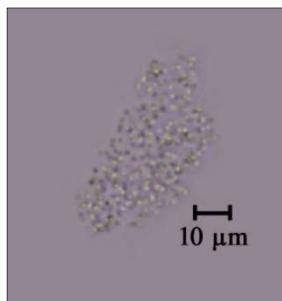

Colony length - 27 µm

**Comments:**

Colony of 2 hemispherical cells enclosed by colonial sheath, bright blue green.

Genus: ***APHANOCAPSA*** Nageli

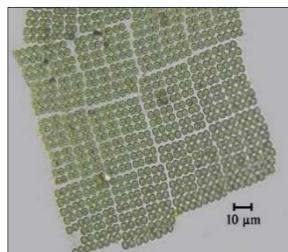

**237. *Aphanocapsa delicatissima*** West & west  
Komarek, 2013. p. 151, fig. 171

**Dimensions:**Cell breadth – 0.8 $\mu$ mColony length - 50 $\mu$ m**Comments:**

Cells spherical, colonies irregular, minute, bluish colour.

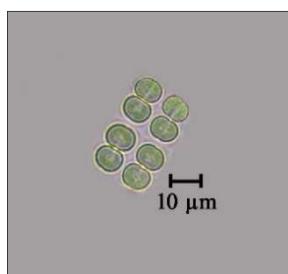

Genus: ***MERISMOPEDIA*** Meyen

**238. *Merismopedia elegans*** A.Braun ex Kützing  
Komarek, 2013. p. 180, fig. 227

**Dimensions:**Cell breadth - 5 $\mu$ m**Comments:**

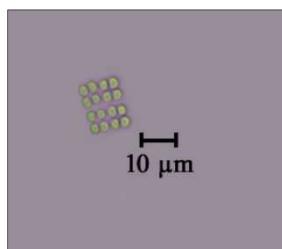

Cells spherical, densely arranged, granular content, colonies rectangular.

**239. *Merismopedia smithii*** De Toni  
Prescott, 1982. p. 459, pl. 100, fig. 18

**Dimensions:**Cell breadth - 9 $\mu$ m**Comments:**

Cells spherical, large sized, mucilage distinct.

**240. *Merismopedia tenuissima*** Lemmermann  
Komarek, 2013. p. 174, fig. 219

**Dimensions:**Cell breadth - 2 $\mu$ m**Comments:**

Cells hemispherical, blue green, colonies rectangular, densely packed cells.

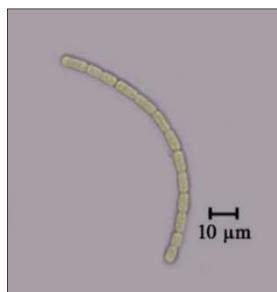

Order : **Oscillatoriales**

Family : **Pseudanabaenaceae**

Genus: **PSEUDANABAENA** Lauterborn

**241. *Pseudoanabaena galeata*** Bocher

Komarek, 2013. p. 88, fig. 67

**Dimensions:**

Cell breadth – 1.2 $\mu$ m

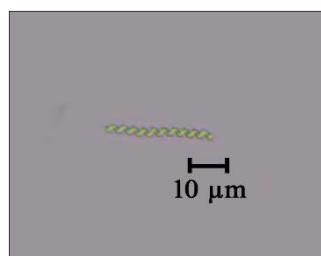

**Comments:**

Cells cylindrical with rounded ends, connected with cross walls, curved.

Genus: **SPIRULINA** Turpin ex. Gardner

**242. *Spirulina menengiana*** Zanardini ex Gomont

Komarek, 2013. p. 148, fig. 173

**Dimensions:**

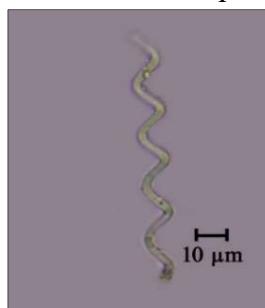

Cell breadth - 1 $\mu$ m

**Comments:**

Thallus thin, blue green, not constricted at walls.

**243. *Spirulina subsalsa*** Oersted ex Gomont

Komarek, 2013. p. 148, fig. 175

**Dimensions:**

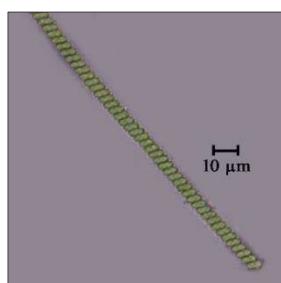

Cell breadth - 3 $\mu$ m

**Comments:**

Trichomes coiled, not constricted at walls, blue green.

**244. *Arthrosira fusiformis*** Komarek et Lund

Komarek, 2013. p. 150, fig. 176

**Dimensions:**

Cell breadth – 1.2 $\mu$ m

**Comments:**

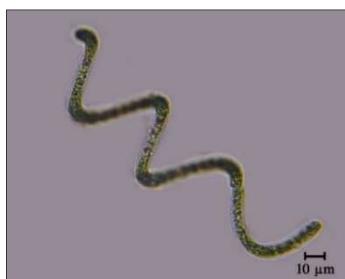

Thallus bright green, densely screw like coiled, not constricted at walls.

Family: **Phormidiaceae**

Genus: ***ARTHROSPIRA*** Stizenberger

**245. *Arthrosira khannae*** Drouet et Strickland

Komarek, 2013. p. 347, fig. 482

**Dimensions:**

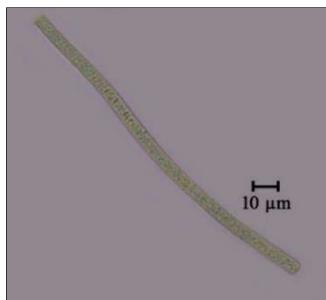

Cell breadth - 3 μm

**Comments:**

Trichomes solitary, free floating, loosely coiled and granulated.

Genus: ***PLANKTOTHRIX*** Anagnostidis et Komarek

**246. *Planktothrix agardhii*** Anagnostidis et Komarek

**Dimensions:**

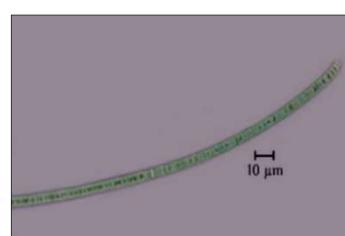

Cell breadth - 6 μm

**Comments:**

Filaments solitary, straight, granulated cross walls.

**247. *Planktothrix* sp.**

Komarek, 2013. p. 439, fig. 639

**Dimensions:**

Cell breadth - 5 μm

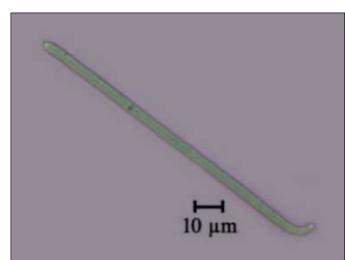

**Comments:**

Filaments solitary, straight, not constricted at the granulated cross walls, attenuated ends.

Genus: ***PHORMIDIUM*** Kuetzing

**248. *Phormidium irriggum*** Angnostidis et komarek

Komarek, 2013. p. 421, fig. 602

**Dimensions:**

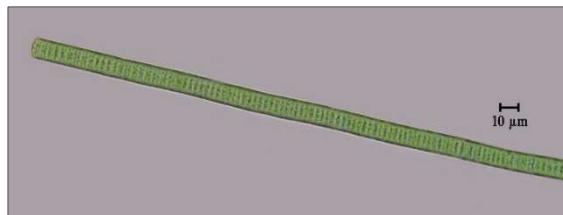

Cell breadth – 4.5 μm

**Comments:**

Filaments solitary, straight, granulated cross walls, attenuated ends.

**249. *Phormidium* sp.**

Komarek, 2013. p. 593, fig. 886

**Dimensions:**

Cell breadth - 10µm

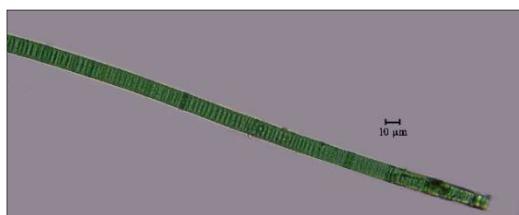

**Comments:**

Thallus blue green, straight, granulated, not attenuated at ends.

Genus: ***OSCILLATORIA*** Vaucher

**250. *Oscillatoria jenesis* Schmid**

Komarek, 2013. p. 593, fig. 884

**Dimensions:**

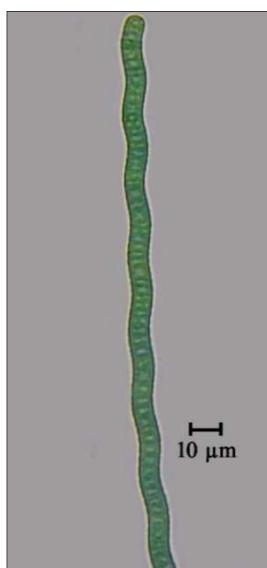

Cell breadth - 8µm

**Comments:**

Thallus solitary, not constricted, flattened-rounded apical cells.

**251. *Oscillatoria limosa* Agardh ex Gomont**

Komarek, 2013. p. 599, fig. 902

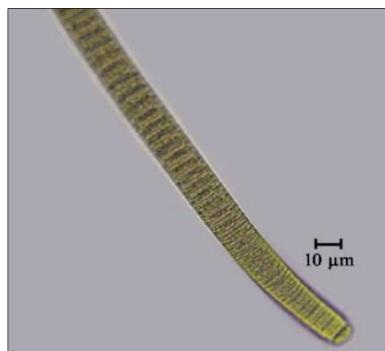

**Dimensions:**

Cell breadth - 7µm

**Comments:**

Thallus blue green, loosely spirally coiled, not attenuated and capitate at ends.

**252. *Oscillatoria princeps* Vaucher ex Gomont**  
Komarek, 2013. p. 590, fig. 883

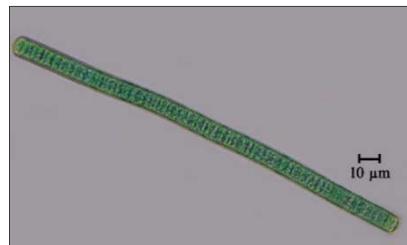

**Dimensions:**

Cell breadth - 21 $\mu$ m

**Comments:**

Thallus straight, long, attenuated at ends, granulated cross walls.

**253. *Oscillatoria lutea* Agardh ex Gomont**  
Komarek, 2013. p. 599, fig. 802

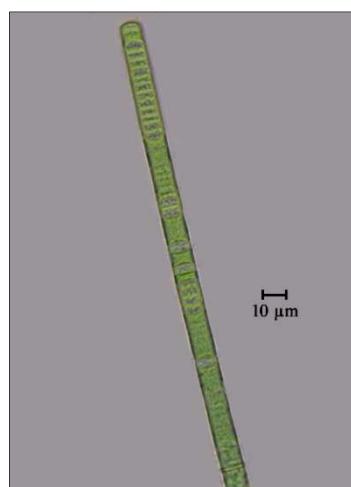

**Dimensions:**

Cell breadth - 8 $\mu$ m

**Comments:**

Filaments solitary, dark blue green, straight, granulated cross walls, not attenuated at the ends

**254. *Oscillatoria subbrevis* Schmidle**  
Komarek, 2013. p. 599, fig. 914

**Dimensions:**

Cell breadth - 10 $\mu$ m

**Comments:**

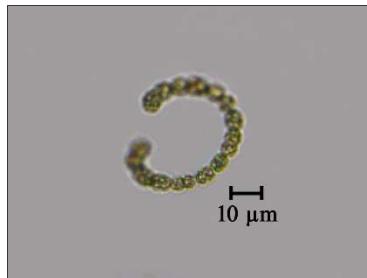

Thallus straight, granulated cross walls, rounded apical cells.

Family: **Nostocaceae**

Genus: **DOLICHOSPERMUM** Hoffmann et Komarek

**255. *Dolichospermum perturbatum* (Hill) Wacklin**

Komarek, 2013. p. 704, fig. 868

**Dimensions:**

Cell breadth - 5µm

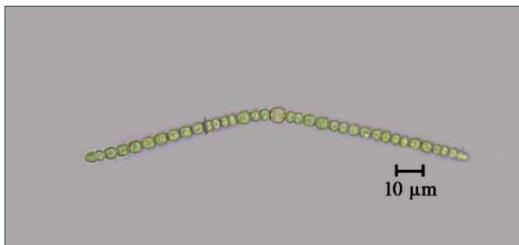

**Comments:**

Trichomes circular with spirals, granulated, not attenuated at ends.

Genus: **ANABAENA** Bory

**256. *Anabaena ghosei* Welsh**

Komarek, 2013. p. 835, fig. 1061

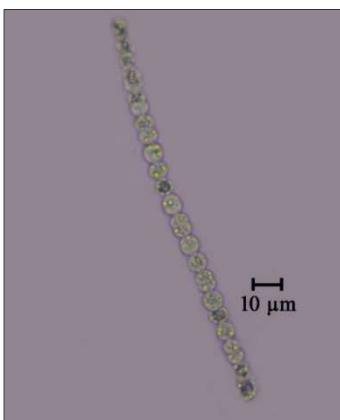

**Dimensions:**

Cell breadth – 3.5µm

**Comments:**

Filaments short, constricted at walls, cells barrel shaped, apical cells conical.

**257. *Anabaena* sp.**

**Dimensions:**

Cell breadth – 7µm

**Comments:**

Filaments straight, constricted at walls, granulated and barrel shaped.

#### 4.4 Quantitative analysis of phytoplankton

Station wise and month wise distribution of taxa during the study period was given in tables 5 & 6. Highest number of taxa were recorded from station 7 (353120 cells/L) and lowest at station 10 (31020 cells/L). Month wise highest taxa was recorded in May (217260 cells/L) and lowest in June (25330 cells/L).

**Table 5. Monthly distribution of average number of algal taxa from the rivers in Palakkad district**

#### 4.5 Community structure

A community of organisms is made up of all the interacting populations of a species that live in a specific area or habitat. Species diversity provides scientific understanding of communities and ecosystems in ecological studies. The species richness, evenness, Shannon and Simpson indices are used to measure biodiversity.

The water quality of the rivers in Palakkad district were analysed with the environmental variables as well as phytoplankton abundance and community structure. Seasonal variations in the composition and abundance of freshwater phytoplankton are influenced by interactions between physical and chemical factors, which are in turn influenced by environmental factors (Reynolds 1984). The changes in water quality are reflected by phytoplankton community structure, distribution patterns, and the proportion of sensitive species (Gharib et al. 2011; Sudeep and Hosmani 2007).

#### 4.5.1 Diversity indices

The species diversity in various stations and months among the phytoplankton were recorded in tables 8 and 9. Number of taxa were obtained higher in May (137) and lowest obtained in July (101). The study reports that the highest taxa recorded at station 7 (135) and lowest at station 9 (57). The Shannon-wiener's diversity index value of the stations study showed comparatively highest value (4.99) during May and lowest value (2.25) in June. Station wise indices found to be high in station 7 (4.3) and low in station 9 (2.96). The highest Simpson diversity were obtained during the month of May (0.98) and least during June and July (0.92). Highest evenness index value was observed in April (0.69) and lowest value in December (0.29). The evenness value were recorded at station 7 was high (0.55) and low (0.34) at station 9. The phytoplankton richness was maximum in May (11.37) and minimum in June (9.16) and also highest richness value was obtained at station 7 (10.49) and lowest at station 9 (5.35).

10	58	3.37	0.93	0.51	5.51

#### 4.5.2 Multivariate similarity analysis

The average level of similarity between stations and months in terms of phytoplankton abundance and composition was determined using multivariate similarity analysis, as well as how evenly this similarity is distributed. SIMPER analysis was carried to identify the most contributed stations and months in determining algal class as temporal factor according to Bray-Curtis similarity.

Stations 7, 3, 4, 5 and 6 were contributed more than 69% of the phytoplankton abundance in the study area (Table 10). When comparing all algal classes, the contribution percentage of station 7 was higher (22.71), followed by station 3 (12.54), station 4 (12.48), station 5 (11.3) and station 6 (10.68). Month wise similarity analysis results that high contribution percentage towards the month of May (43.19), followed by April (14.24) and March (12.2). The analysis of the data confirmed that pre monsoon season and station 7 was contributing high percentage to the significant variation in phytoplankton abundance. Analysis of similarity (ANOSYM) within

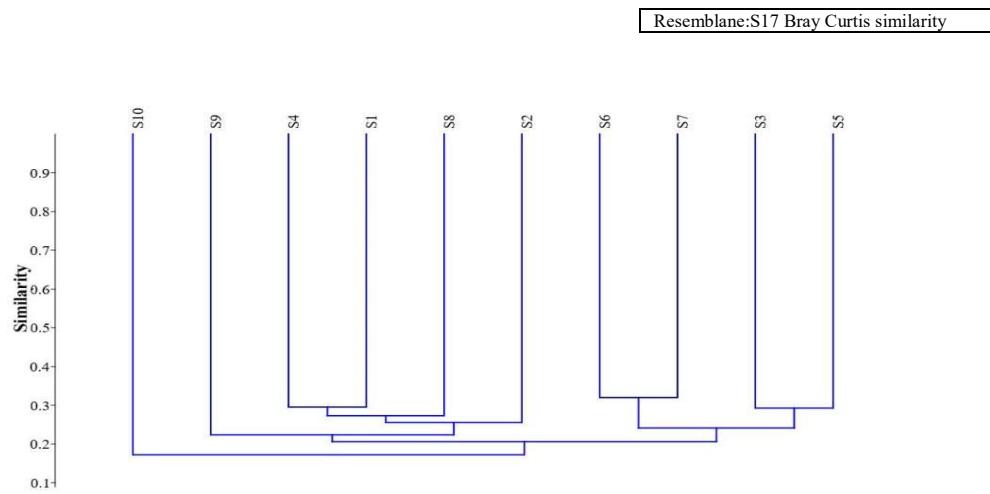

stations and months can be used to determine statistical significance. The results show that phytoplankton distribution differs significantly between stations ( $P = 0.002$ ,  $R = 0.91$ ) and months (( $P = 0.001$ ,  $R = 0.82$ ).

**Table 10. data showing the contribution percentage of phytoplankton abundance in different stations and months**

Variables	Av. Dissim.	Contrib.%	Cum.%

Nov	1.563	2.65	95.79
Aug	1.264	2.142	97.94
Jun	0.8359	1.42	99.35
Jul	0.3822	0.65	100

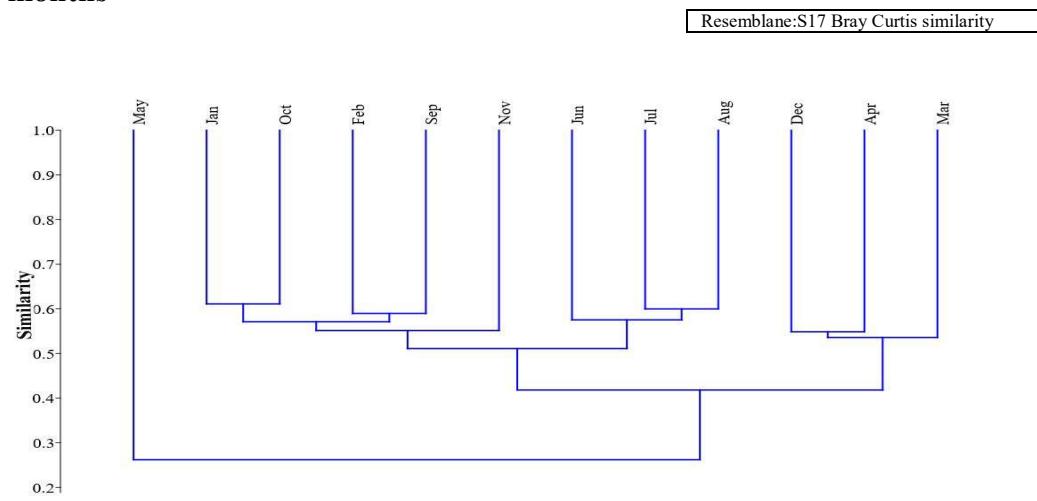

The results of the hierarchical cluster analysis, implemented on the stations and months are presented as a dendrogram that represents the grouping based on the Bray-Curtis similarity matrix values (Figures 17 and 18) formed two distinct groups at 0.223 similarity level. Station 10 forms the outgroup to other stations. The first group comprised four stations (5, 3, 7 and 6). The second group comprised four stations (2, 8, 1 and 4). Station 9 have close similarity with station 10. These two stations are located along the river Bhavani. Cluster analysis revealed that phytoplankton composition in stations 9 and 10 were distinct from that of other stations.

**Figure 17. Dendrogram shows the hierarchical cluster analysis in different stations**

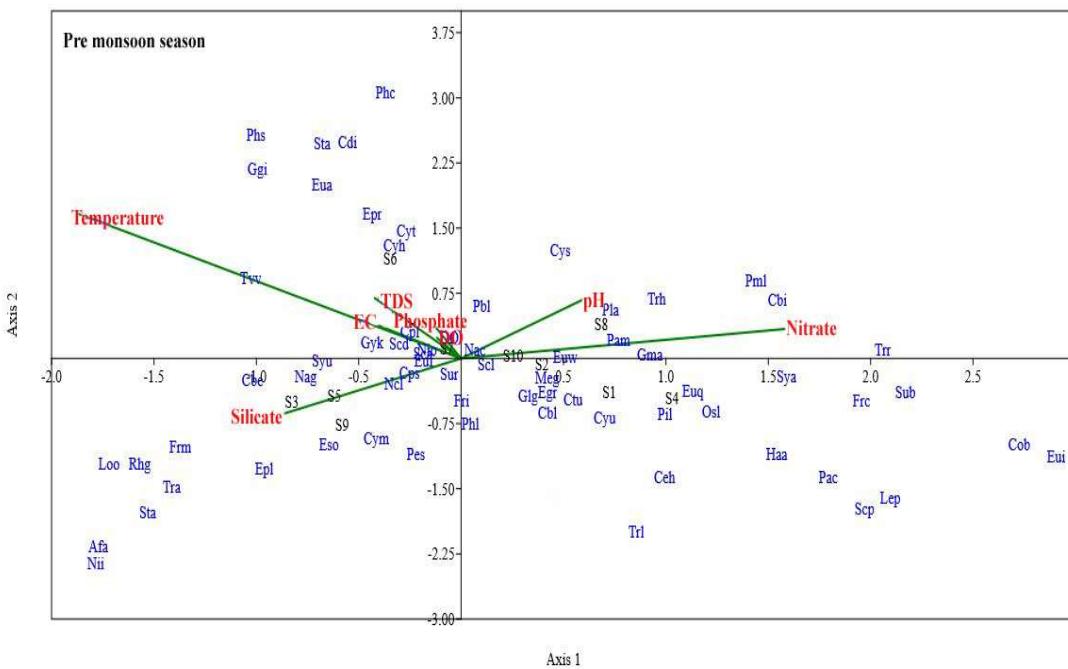

The month wise cluster analysis based on the Bray-Curtis similarity matrix values (Figure 18) formed two distinct groups at 0.431 similarity level. The month of May represents the outgroup to other months. The first group comprised of three months which were mainly pre monsoon months and the second group comprised of monsoon and post monsoon months. Cluster analysis revealed that the phytoplankton composition in the ecosystem differed from that of the monsoon and post monsoon months.

**Figure 18. Dendrogram shows the hierarchical cluster analysis in different months**

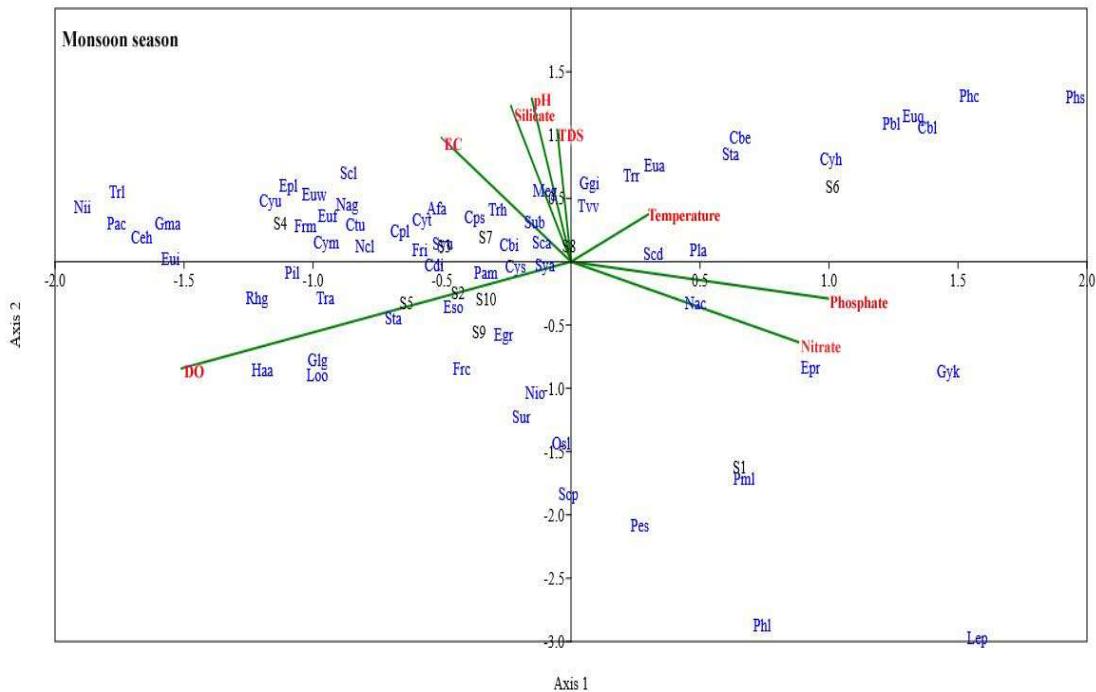

Canonical Correspondence Analysis (CCA) is a multivariate tool to illuminate the relationships between phytoplankton and their environment, helps to extract environmental gradients from ecological data sets. In the present investigation, the ordination plot has revealed the statistically significant influence of physico chemical parameters on phytoplankton distribution and abundance. Seasonal variations in physico chemical parameters and quantitative assessment of phytoplankton were used as a baseline for CCA analysis. The ordination plot works out the abundance of species based on the score provided by (Chandler 1970). The number of species in a sample set larger than 100 used for the analysis which represents the 'very abundant' level. Table 11 represents the list of taxa separated for CCA analysis. The summary of CCA output in axis 1 and axis 2 given in the figures 19, 20 and 21. Environmental variables are depicted by long arrows and species are given in code words.

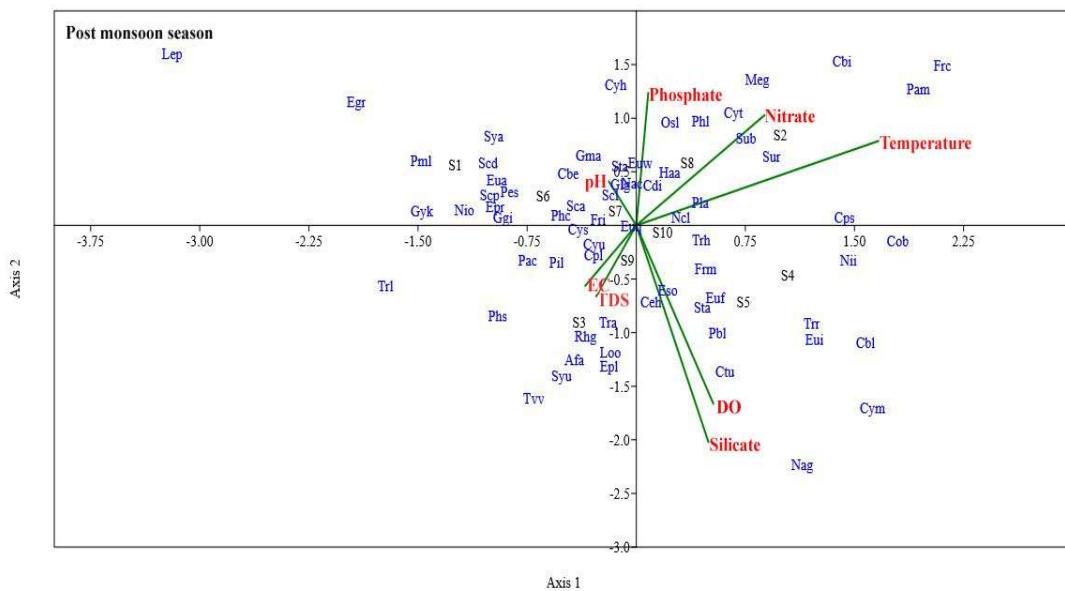

**Figure 19.** CCA plot showing the variation between environmental parameters and phytoplankton in Pre monsoon season

#### 4.6 Phytoplankton as pollution indicators

Environmental disturbances induce changes in structure and function of the biological system and nature of water quality. Water pollution indices are commonly used for the evaluation of water quality. Most of our water bodies, including ponds, lakes, rivers, streams, and canals, have become polluted as a result of the discharge of industrial effluents, detergents, agricultural runoff water and domestic sewage. In this study, two indices are taken into consideration of biological information based on phytoplankton Boyd's diversity index and Palmer's pollution index.

**Table 12. Boyd's diversity index of phytoplankton score from the study area**

Months	No. of genera (S)	Total no. of phytoplankton (N)	Score
January	31	40548	2.82
February	24	39430	2.16
March	25	76810	2.12
April	21	96300	1.65
