## LIST OF CONTENTS

| CHAPTER   | TITLE  | PAGE<br>NO. |
|-----------|--|-------------|
| CHAPTER 1 | INTRODUCTION AND REVIEW                                    | 1           |
|           | Corrosion  | 1           |
|           | Mechanism of corrosion                                     | 2           |
|           | Types of corrosion   | 5           |
|           | Necessity of corrosion control                             | 9           |
|           | Methods for corrosion control                              | 10          |
|           | Corrosion monitoring techniques                            | 16          |
|           | Natural organic inhibitors as a tool for metal corrosion   | 35          |
|           | Synthetic organic inhibitors as a tool for metal corrosion | 41          |
|           | Schiff bases as a tool for metal corrosion inhibition      | 44          |
|           | Schiff bases as a tool for microbial induced corrosion     | 48          |
|           | Scope and objectives of the present investigations         | 60          |
| CHAPTER 2 | MATERIALS AND METHODS                                      | 63          |
|           | Natural corrosion inhibitors                               | 63          |
|           | Preparation of extracts                                    | 63          |
|           | Materials and medium                                       | 63          |
|           | Spectral analysis  | 65          |
|           | Screening of phytochemicals                                | 65          |
|           | Weight loss measurements                                   | 67          |
|           | Electrochemical studies                                    | 67          |
|           | Adsorption isotherms                                       | 69          |
|           | Scanning electron microscopy                               | 69          |
|           | Atomic force microscopy                                    | 69          |
|           | Quantum mechanical calculations                            | 69          |
|           | Response surface methodology (RSM)                         | 70          |
|           | Synthetic corrosion inhibitors                             | 73          |
|           | Materials and methods                                      | 73          |
|           | Isolation of corrosion causing bacteria                    | 76          |
|           | Identification of the bacterium                            | 77          |
